Rev 3.0

Meals on Wheels

Scorched Earth

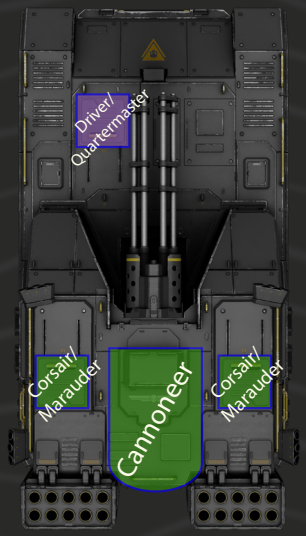

Created by InvisoBill, FunctioningCyber, and Undeadender
With support from Kai's Commandos

Meals on Wheels: Scorched Earth is an extension of MoW: (Team) Reloaded.
Read and Understand (Team) Reloaded first before trying Scorched Earth.
DO NOT ATTEMPT this strategy if even one player is not fully committed to coordinated teamplay.

What is It?

Scorched Earth is specifically designed for use against the Votesnatchers and must be run in a full squad.

The Supply FRV is replaced by the Maelstrom, allowing a new form of takedown(DESTROYER); now the preferred form of takedown while in transit. Both phase 1 and 3 of the takedown drill remain relatively unchanged. If using the RR, "DISMOUNT TAKEDOWN" will be called.
To the left is the new seating chart, Quartermaster is expected to drive.

The Maelstrom can kill Leviathans much faster than the RR and uses smoke to confuse Leviathans' targeting. Distance is required, as the cannon can only tilt ~25° upward, but the missiles have a maximum range of ~300m. The Maelstrom is equipped with 20 missiles, 2100 HMG rounds, and 20 smoke screens.

Color Key

[White Text] - Important info and key comms
[Red Text] - Orbitals/eagles and danger warnings
[Blue Text] - Support weapons and backpacks
[Green Text] - MoW roles and emplacements/sentries
[Purple Text] - Relating to Driver and FRV/Maelstrom
[Light Blue Text] - Relating to Navigator

Scorched Earth

Pitstop Drill

When to use: when Marauder or Corsair need supplies

1. Driver will find a safe area and call,"PITSTOP"; Corsair will hold the area if they have an Exosuit.
2. Call in resupply from the Maelstrom, and a new Exosuit and/or Maestrom if needed.
3. Dismount and Resupply, switching to new vehicles if available.

Drive-By Drill Addition

The Maelstrom can eliminate warpships by firing two missiles anywhere on the shell;
to avoid confusion if using this method, Driver calls "MISSILE WARPSHIP FRONT".

Danger Close

Marauder is equipped with the Airburst Rocket Launcher, they can fire in near the Maelstrom clearing large crowds in a single shot. This does not damage the Maelstrom but is a danger to Exosuits and exposed teammates.
They will call, "DANGER CLOSE", before firing to allow any passengers to duck into the Maelstrom.
To fire without self damage: 1. aim 2. fire and unaim simultaneously.
This will allow you to duck into the Maelstrom before the airburst detonates.

Exosuit Use

Corsair is equipped with an Exosuit allowing them to complete some side objectives solo. If there is a Cognitive Disruptor in the area Corsair will eliminate it as soon as possible. Upload Escape Pod Data can also be completed by Corsair allowing the team to stay mobile. Outposts can be elimated by dismounting and deploying an Orbital Laser or Breacher.

Driving Notes

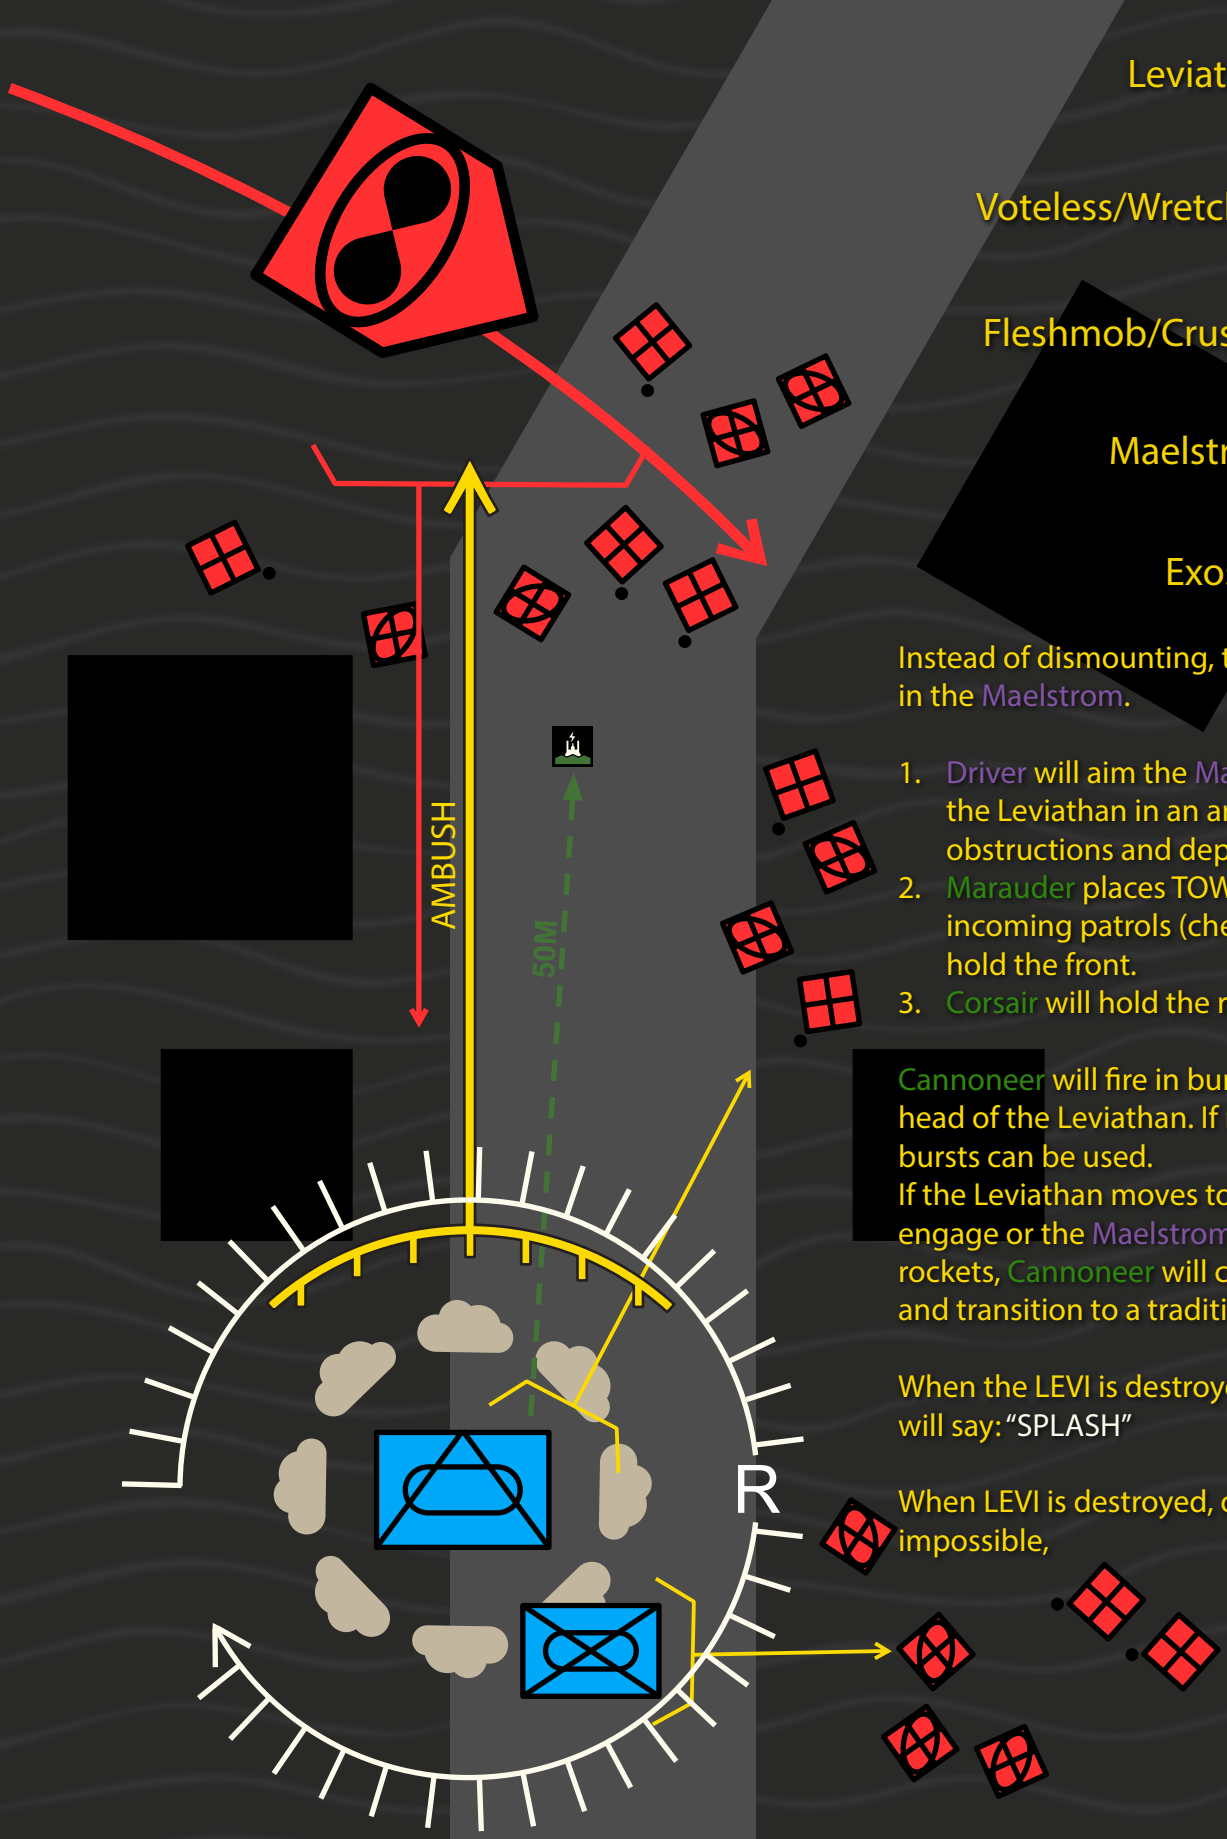

The Maelstrom has similar controls to the FRV, but notable differences are that the handbrake does not allow you to drift; it simply stops the Maelstrom quickly. The Maelstrom can tank turn by holding left or right while stationary; the handbrake can help ensure the Maelstrom is still.

While FRV struggles to navigate the destroyed streets, the Maelstrom can easily drive over most obstacles. Due to this, keeping to the center of roads is recommended.

Invasion Fleet

When Vote Snatchers are paired with Invasion Fleet the stratagy remains the same besides a need for members of the team to be able to eliminate Watchers. Additionally Corsair must keep an eye out for Stingrays, as they heavily damage the Maelstrom.

Phase 2: Destroyer Attack

Leviathan

Voteless/Wretches

Fleshmob/Crusher

Maelstrom

Exosuit

Instead of dismounting, the team will stay in the Maelstrom.

1. Driver will aim the Maelstrom towards the Leviathan in an area clear of obstructions and deploy smoke.
2. Marauder places TOWER to zone incoming patrols (check radar) and hold the front.
3. Corsair will hold the rear.

Cannoneer will fire in bursts of two at the head of the Leviathan. If necessary, larger bursts can be used.
If the Leviathan moves too close to engage or the Maelstrom runs out of rockets, Cannoneer will call, "DISMOUNT", and transition to a traditional attack.

When the LEVI is destroyed, Cannoneer will say: "SPLASH"

When LEVI is destroyed, or ATTACK is impossible,

Loadout Changes

Without Watchers weaponry becomes more unform. All roles share primary, secondairy, and grenade options.
All except Marauder bring a Maelstrom. Due to being in the Maelstrom most of the time heavier armor is benefical, allowing greater surviabilty when dismounted.

Primaries

Self defense is important. ARs, SMGs, shotguns, and LAS-# weaponry do well. Invasion Fleet makes ARs most prefered.

Secondaries

The Breacher is hard to beat, only other explosives can replace it. Used on Crushers and Fleshmobs.

Armor Weight

Medium Heavy

Grenades

Area denial is king, use fire or gas. Throw them proactively.

Cannoneer

You will drop the first Maelstrom and Exosuit. When a Dismount Takedown is used drop the Shield Generator Relay and get the RR up.

Quartermaster

Your first Laser Cannon will go to Corsair. Aim for the head on Crushers to quickly pop helmets. When dismouting try to throw a Telsa Tower. The Laser Cannon is best but other options can work.

Marauder

The Airburst is an absolute powerhouse, clearing crowds with ease, just be sure to not hit teammates.
The Telsa Tower and Eagle Napalm cut off of hostile avenues of approach. The Orbital Laser is for Outposts.

Corsair

Heavy firepower if required. "Stand by for Titanfall!" is the only approved loadout.
You are also the only member allowed to bring Melta mines.
If it gets to much, eject and deploy a hellbomb to clear the area.
Flex slot: Orbital Barrages or Laser, you will rarely have the opportunity to use it. When you can, heavy firepower is best.
Piloting notes: the Breakthrough is best
1 well placed shot on flak gun pops helmet of crushers, and a second one finishes them off.
you can parry attacks with the shield melee
hostiles WILL attack mech unprompted
melee is VERY effective
On Invasion Fleet target Stingrays aggressively
