

Meals on Wheels

Created by InvisoBill,
FunctioningCyber, and Undeadender
With support from Kai's Commandos

As the Illuminate ravages our outer worlds, we take to the streets, in our Jeeps. Shaving valuable minutes off of each operation with the use of the FAST RECON VEHICLE (FRV), We will utilize our greatest tech since Roman times -- ROADS.

However, an ominous presence plagues our valiant helldivers in the form of the massive and terrible LEVIATHAN. Capable of destroying our buggies in nary a single well placed shot.

Fear not brave helldiver, for a new strategy is emerging... Using these tactics we will BRING THE WHALES DOWN, and complete our objectives in RECORD TIME. Ensuring that the fate of humanity and managed democracy will remain, stronger than ever.

Glossary of Terms

FRV - Fast Recon Vehicle
HMG - The FRV's Heavy Machine Gun
RR - Recoilless Rifle
GL - Grenade Launcher
AMR - Anti-Materiel Rifle
AC - Autocannon
AO - Area of Operation
AV - Armor Value
SOP - Standard Operating Procedures
E-SOP - Emergency SOP
OBJ - Objective site

[appx. #.#] - see Appendix for additional info
[White Text] - Important info, key comms, and alternative weapons
[Red Text] - Targets for weapons, Extremely Important Info, and E-SOP
[Blue Text] - Support Weapons and stun targets for weapons
[Green Text] - MoW roles
[Purple Text] - Relating to the Driver and FRV/Bastion
[Light Blue Text] - Relating to the Navigator

What is Meals on Wheels?

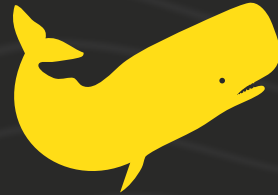

Meals on Wheels (MoW) is designed to be a hit-and-run strategy centered around two main stratagems as pillars -- the **RECOILLESS RIFLE (RR)** & **FAST RECON VEHICLE (FRV)**.

These pillars are manned by our two teams:

The Whaling Team

Consisting of **Gunner** and **Spotter**. The **RR** reloading mechanic has the highest damage output in the game; it is their harpoon gun. With its flexibility, the **RR** is the perfect candidate to take on the superheavy Illuminate LEVIATHAN. The Whaling Team will determine the threat level of Leviathans and when to engage them. They pave the way for the squad and remove this threat from the skies.

Boosters

The Sailing Team

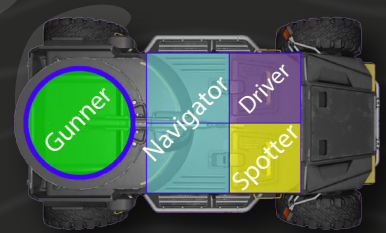

This includes our **Logistics** and **Security**; one will be designated **Driver**, and the other, **Navigator**. The **FRV** will propel you through your mission; it will be your ship. It is also a focal point for your squad, making it easy to keep everyone together for a speedy getaway. The Sailing Team gives the **RR** platform rapid deployment, extra security, and longevity through the use of resupplies.

Meals on Wheels requires that every player fulfill the duty of their role. **DO NOT ATTEMPT** this strategy if even one player is not fully committed to coordinated teamplay. This guide has been crafted to give you the best information from the front lines, to better onboard new sailors to the strategy.

Your Ship

The **FRV** keeps you mobile, picking up the squad and moving locations quickly. It allows your team to rapidly deploy on objectives, bases, and Leviathans, while simultaneously disengaging from Illuminate ship reinforcements. To best take advantage of this increased mobility, the team needs to transition into and out of the **FRV** seamlessly. This is why each role in the squad has a designated position:(see right). **DO NOT** make your squad wait for you to mount up. Stop fighting and get in. [appx. 5.2, 5.3]

The Supply Chain

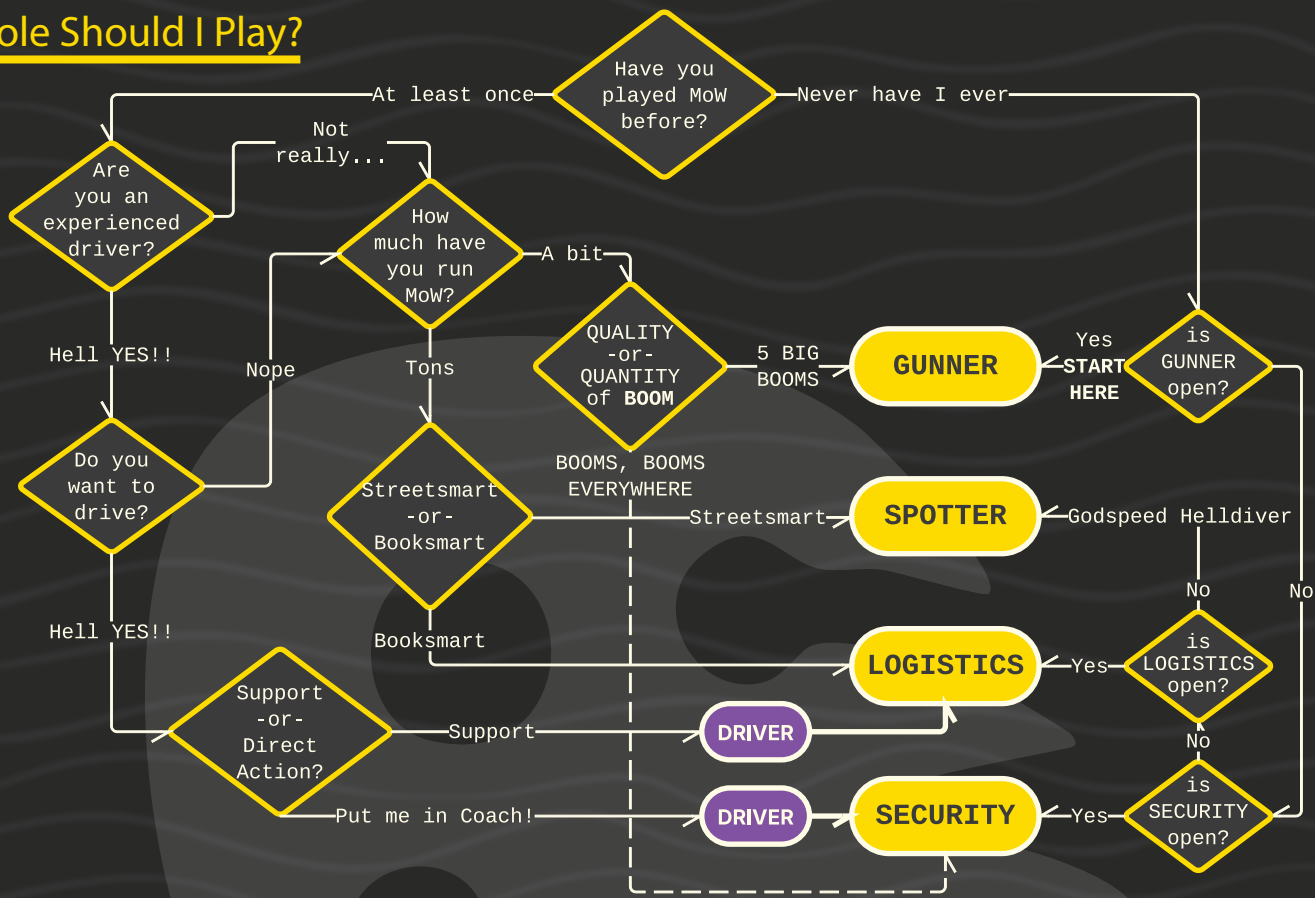

The Meals on Wheels strategy is uniquely capable of engaging and destroying multiple consecutive Leviathans. The **RR** is hungry for ammo, and we're here to feed it. The **Logistics** resupplies the **Spotter**, who in turn loads the **Gunner**, who sends the goods down range. Linked to the right is a video of the Resupply Drill. Every MoW operator is well-versed in it. Learn it, love it.

Role Rundown

What Role Should I Play?

Gunner

If any role is at the center of MoW, it is the **Gunner**. You direct the power of the **RR** to take down Leviathans. This frees the team from the oppressive area denial effect of these superheavy units. You are equipped to take hits like a beast, and your Shield Generator Pack is critical to protecting the **FRV**.

Logistics

This is a role for Helldivers who excel at resource management and thinking on their feet. Your job is to keep an eye on stratagem cooldowns and the **Spotter's** recoilless ammo. On objectives, you are working terminals, turning valves, etc. This role assists in locating Leviathans and provides secondary security for the Whaling Team.

Spotter

The **Spotter's** duty is to always be on watch for Leviathans lurking, gauging their threat level to the team. This role is for leaders; you make the call to initiate a Leviathan takedown. It is critical to stay close to your **Gunner**. Direct them, coach them, and link up for the team-assisted reload.

Security

The name of this role says it all. You are the bodyguard of the Whaling Team. Without the buffer that you provide, taking down a Leviathan in a hot zone is significantly more difficult. Your loadout is solely focused on slaying as many hostiles threatening the squad and keeping them safe at all costs.

Driver & Navigator

Logistics already knows what resources the team has at their disposal, allowing them to focus on HOW to tackle the next objective. This makes them a natural fit for **Navigator**. However, this leaves **Security** as **Driver**, slowing their ability to engage hostiles. As the team grows in experience with MoW, the mental load of **Navigator** and resource management is DEMOCRATISED. This allows **Security** to more easily take on the **Navigator** role AND enter the fight faster.

The Whaling Team

Since the invasion of Super Earth, the Leviathans have terrorized our citizens and SEAF forces. The lives of countless Helldivers cut short from these nearly impervious enemies.

As a member of the WHALING TEAM, you will bring the fight to THEM. You will understand your quarry, bringing the might of the RECOILLESS RIFLE to harpoon them from our skies.

No longer will they fly unrestricted through our cities.

No longer will our allies fear them.

The Illuminate will know of our victory by the carcasses left in our wake.

Gunner

Spotter

Leviathan Bestiary

Know thy enemy...

Let's get one thing straight -- Leviathans have no weak points; the only way to kill them is to deal 15,000 (15k) damage. Best case scenario you need at least 5 shots from the Recoilless Rifle aimed at 5 different parts of the Levi to bring it down.

This is difficult at long range, bad angles, or under pressure, but a dead Leviathan is always better than a full pack. When the Whaling Team is called to "ENGAGE" rapid deployment, regardless of circumstances, is essential.

The **RR** does 3.2k damage per shot at Armor Penetration 6 (AP6). 3.2k damage x 5 shots = 16k damage.

But why does it sometimes take more than 5 shots? Each part (shown right) has **MAGENTA** outlines with its own HP pool and Armor Value 5 (AV5). If you do enough damage to break a part, damage exceeding the HP of the part will be discarded. This is why you want to avoid hitting the parts highlighted in **RED** and avoid hitting the **YELLOW** parts more than once.

Example: the Tail has 3.9k HP. 2 hits with the RR can do up to 6.4k damage. $3.9k - 6.4k = -2.5k$ meaning hitting this part twice will result in 2.5k damage discarded!

If you break a part, it will reveal the smoking blue interior with AV4. The interior is the Main Body hitbox, and any **RR** rounds here will do 100% damage to the Leviathan.

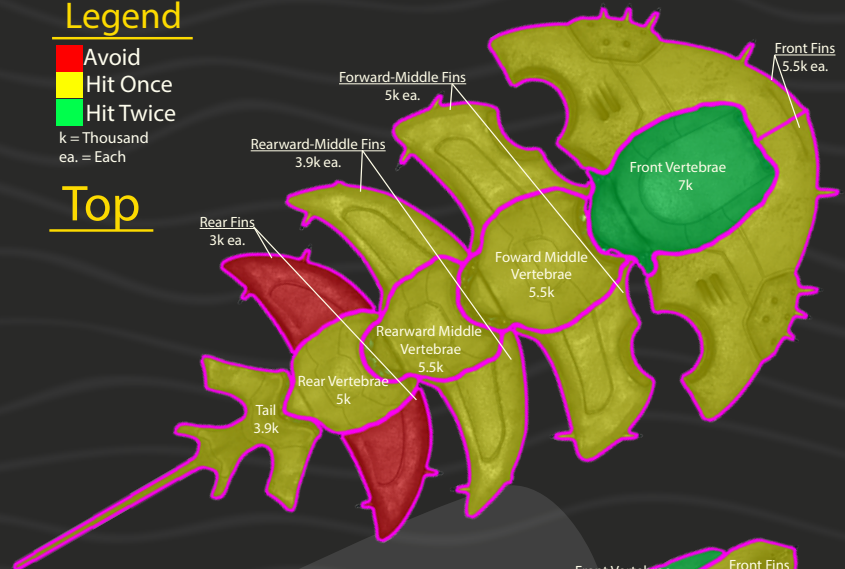

A 5-shot takedown will empty the **Spotter's** pack and leave the **RR** loaded. The **Spotter** can refill his pack fully from a stratagem resupply, which is more efficient than using the supply pack.
[appx. 2.3, 7]

The image right is the threat level gauge for a Leviathan, showing danger based on its distance and relevance. It ranges from **Low** (safe, far away, or moving away) to **Severe** (very close, moving into area of operation and dangerous). The needle is at **High**, meaning it's time to "ENGAGE!"

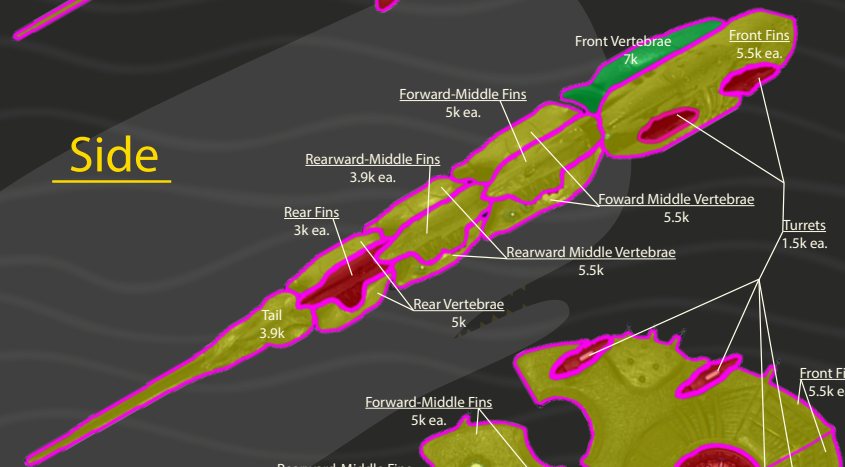

Legend

- Avoid** (Red)
 - Hit Once** (Yellow)
 - Hit Twice** (Green)
- k = Thousand
ea. = Each

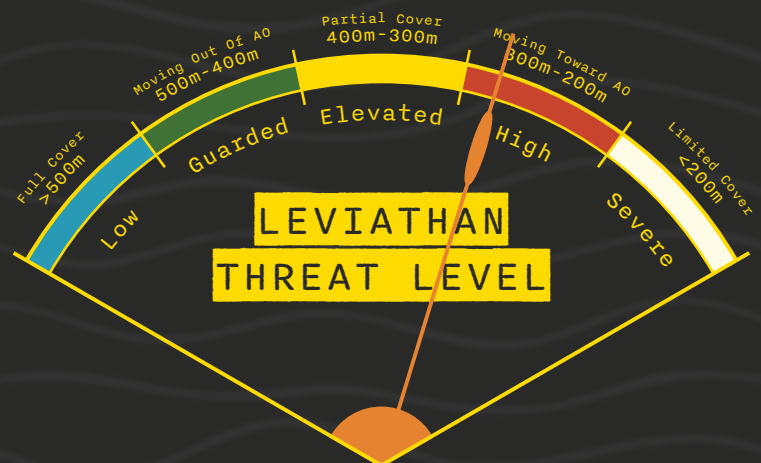

Top

Side

Bottom

Gunner SOP

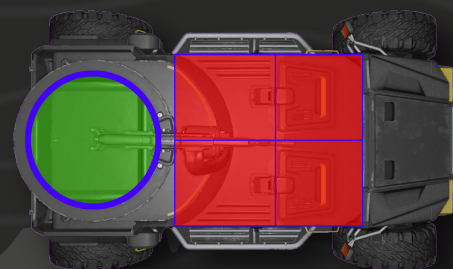

Load-In

Call Shield Generator Pack and Recoilless Rifle (RR) Equip only RR (leave pack for Spotter).[appx. 5]

Seat

Transit

Keep the Heavy Machine Gun (HMG) pointed rear of FRV. Notify Driver when reloading last magazine.

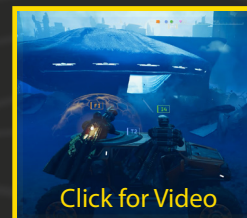

Objectives

Use HMG for fire support on approach.
Take a central position with Spotter and alternate shield relays.
Be ready to engage Leviathans (see Takedown).[appx. 6.3]
If there is a package you will carry it.

Outpost

Follow specific directions from Driver.
Take out shields on Illuminate ships as directed by Driver.
Hold fire when Spotter leans to destroy the ship or hazards in the outpost.

[Click for Video](#)

Takedown

When Spotter calls out Leviathan, confirm that you have visual.
Dismount FRV with Spotter on their command.
Follow Spotter to best line-of-sight to Leviathan (usually near relay beam).
Throw a (Stun) grenade and QUICKLY clear the shield relay area of chaff (if any).
Clearly say: "ENGAGING LEVIATHAN" and take the first shot.
STAND STILL with RR EQUIPPED and await Spotter reload.
Fire upon Leviathan until it is destroyed.

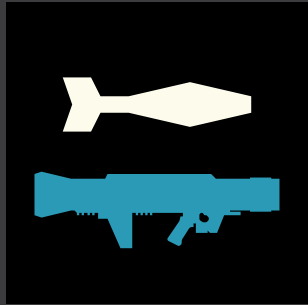

[Click for Video](#)

If Leviathan flies behind cover, pursue if possible.
Move to a position where you can engage again. Spotter will follow.
When the Spotter's shield relay goes down, throw down your own.
If Spotter says, "BREAK", throw a (Stun) grenade and engage nearby hostiles until safe.

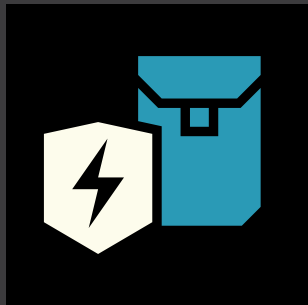

If Security says, "LEAVE", disengage from the hostile forces.
Spotter will determine if the Gunner will mount FRV or COMMIT.
When the Leviathan is vanquished, say: "DOWN".
Keep a running total if you like![appx. 6.1, 6.3, 6.4, 7]

Stratagems

Recoilless Rifle

Never leave port without your HARPOON GUN. MoW uses the RR delivering massive damage to Leviathans to BRING THEM DOWN.

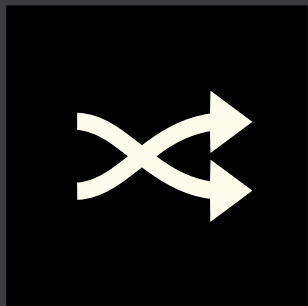

Shield Generator Pack

This is your team's lifeline. It protects Spotter while they load you and the FRV while you're in it.

Shield Generator Relay

It is essential to run the 2nd Relay. They can be alternated, creating continuous Leviathan protection during takedowns.

Flex Slot

Tesla Tower - For zoning
Gas/EMS mortar - Area Denial
Orbital Laser - For Blitz
Portable Hellbomb - For Monolith

Gunner Loadout

Primary Options

	Explosive Crossbow 1 Good chaff clear Can flip FRV One handed Can destroy Ships and Lightning Spires Targets: Voteless Horde, Overseers, Fleshmobs		Purifier 2 Very large AOE Good ammo economy Alternative(s): Punisher Plasma Targets: Voteless, Watchers, Overseers, Fleshmobs Stun Targets: Harvesters		Liberator/Carbine 3 Good all-arounder, Carbine consumes ammo quickly Alternative(s): Tenderizer, Defender Tenderizer is better for Overseers, worse for Voteless Targets: Voteless, Overseers, Watchers
---	---	---	---	---	---

Grenade Options

	Shield 1 Allows even more shields Can be thrown quickly—throw while relay deploys Keeps Spotter completely covered
	Stun 2 Throw when exiting FRV and initiating takedowns Allows more reaction time at point blank range Reduces pressure from Voteless during takedowns Alternative(s): Gas
	Frag 3 Simple and effective crowd control Accessible Alternative(s): Dynamite or Impacts

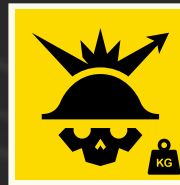

Secondary Options

	Talon 1 High damage, medium pen, Good hipfire Great ammo economy Targets: Voteless, Overseers, Watchers
	Warrant 2 High damage, medium pen, tracking for Watchers, Fast reload and controllable Targets: Voteless, Overseers, Watchers Alternative(s): Verdict, Veto
	Peacemaker 3 High ROF and longevity Accessible Targets: Voteless, Watchers Alternative(s): M6C

Armor

Armor for Gunner is chosen solely for survivability. You MUST run the heaviest armor, best for this is the CPR-80 Bulwark. It will keep the Gunner alive during takedowns, inside Stingray strafes, and on the FRV turret. Heavy Fortified is best if the CPR-80 Bulwark is unavailable. Heavy extra padded can also be effective.

Passive

Concussive
Padding

Fortified

Weight

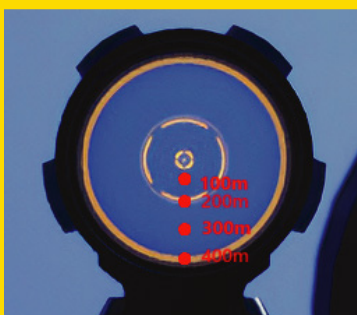

Heavy

Backpack

Shield Generator Pack

Tactical Info

RR Targets: Leviathan, Harvester, Stingray(Emergency)
FRV HMG Priority Targets: Ship Shields, Stringrays, Fleshmobs

The RR rounds have drop, see image left for the reticle holdovers.
Shield Generator Relay - See SOP for usage

FLEX STRATAGEMS

Tesla Tower - Deploy tower 50m from the squad. This is the MoW alternative to a turret. It does not affect the shield relay and if used correctly, will not harm the Whaling Team.

Gas/EMS mortar - Gas is preferred, deploy at takedown sites and objectives.

Orbital Laser - For destroying outposts efficiently in a blitz.

Portable Hellbomb - For destroying Monoliths on the Free the City mission. Do not call in your Shield Generator Pack or Recoilless until after the Monolith is destroyed. Spotter will assist in delivering the Hellbomb.

[appx. 1, 2.1, 2.3, 3.3, 3.4, 3.6, 3.7, 5, 6.1, 6.3, 6.4, 7, 8.1]

Spotter SOP

Load-In

Call Supply Pack (for **Logistics**), call **Grenade Launcher (GL)**, and equip **Recoilless Rifle (RR)** PACK.

Transit

Keep watch and listen for Leviathans

When a Leviathan is spotted, call out **DIRECTION** and **DISTANCE**

Threat assess the Leviathan (see Leviathan Bestiary).

When using **GL**, keep it pointed forward of the **FRV**.

Minimum safe distance for **GL** use is 15m. [appx. 4]

Objectives

Dismount first at objective site, clear site with **GL**.

Take a central position with **Gunner** and alternate shield relays.

Keep watch for Leviathans and be ready to engage them (see Takedown).

Outpost

Follow specific directions from the **Driver**. [appx. 5.4, 9.1]

Use **GL** to destroy Lightning Spires/explosive barrels on approach.

Do not lean while **Gunner** is taking out shields. Once shields are down, lean out and **GL** doorway. Use Orbital Laser when directed by **Driver**.

Takedown

Determine the best place to initiate a takedown.

Do not initiate a takedown in a position that is overrun.

If Leviathan threat level is **ELEVATED** or greater (see Leviathan Bestiary), say "ENGAGE".

Dismount **FRV** immediately with **Gunner**, place **FIRST** shield relay.

Throw grenades in choke-points to keep enemies off the Whaling Team.

Help **Gunner** clear the shield relay area.

Stay next to the **Gunner** at all times, and initiate team reload.

Visually confirm that team reload is happening (**E-SOP**).

When starting a takedown count the rounds in the pack saying, "4, 3, 2..."

Call for **Logistics** when **RR** pack has 2 or fewer rounds.

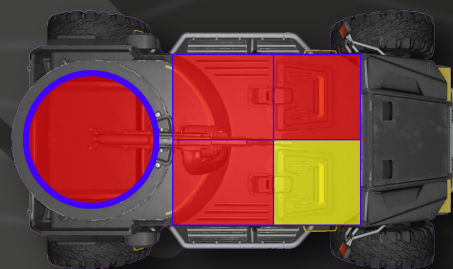

Observe your surroundings, call for **Security** if needed.

If position is compromised while reloading, say: "BREAK".

If **Security** says, "LEAVE", disengage from the hostile forces.

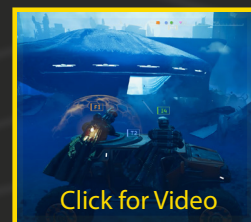

Spotter will determine if the **Gunner** will mount **FRV** or **COMMIT**. [appx. 2.3, 5.1, 5.5, 6.3]

Seat

Tips

Notify logistics when Supply Pack is off cooldown, call in at their request.

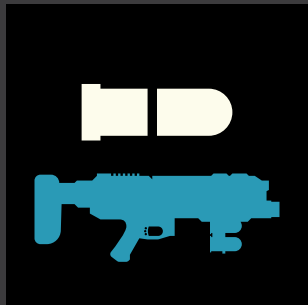

[Click for Video](#)

[Click for Video](#)

Stratagems

Grenade Launcher

If the **RR** is the harpoon, this is your ship's cannons. Destroy enemy ships and clear the wake for your team.

Supply Pack

Always notify **Logistics** when the Supply Pack is off cooldown, that way he can supply someone other than you. Sheesh.

Shield Generator Relay

It's your job to initiate the takedown, and a huge golden bubble communicates that well.

Orbital Laser

You are always riding shotgun, so you are always ready to throw a laser out of a moving vehicle. Do it when **Driver** tells you to.

Spotter Loadout

Primary Options

 1	Scorcher AoE damage, explosive protection from armor Ammo consumption is offset by resupplies from Leviathan takedowns Targets: Voteless, Overseers, Watchers, Fleshmobs	 2	Knight Very high damage Ammo consumption is offset by resupplies from Leviathan takedowns Alternative(s): Gallant, Liberator Variants, Adjudicator, Reprimand, Targets: Voteless, Overseers, Watchers	 3	Punisher/Breaker Short range Punisher has stagger, while Breaker has damage output Alternative(s): Cookout, Trident, M90A, Breaker Incendiary Targets: Voteless, Overseers, Watchers, Fleshmobs
--	--	--	--	--	--

Grenade Options

 1	Gas Area denial, is still passable. Use in choke points on objectives or during takedown.
 2	Stun Throw when exiting FRV and initiating takedowns Allows more reaction time at point blank range Reduces pressure from voteless during takedowns.
 3	Fire Both variants are effective. Large Area fire. Longer Lasting Than explosives.

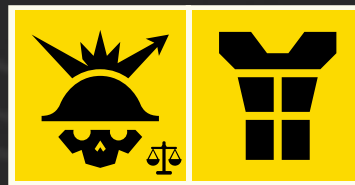

Secondary Options

 1	Redeemer High RoF, light pen, good crowd control. Ammo Consumption offset by resupplies Targets: Voteless, Overseers
 2	Warrant High damage, medium pen, tracking for Watchers, Fast reload and controllable Targets: Voteless, Overseers, Watchers Alternative(s): Verdict, Talon, Peacemaker
 3	Missile Pistol Tracking best to one shot Stringrays Nontracking for Fleshmobs as close range Targets: Stringrays, Fleshmobs, Harvester

Armor

The top choice for **Spotter** is the CPG-48 Sapper armor. Concussive Padding improves survivability against most Illuminate and the Whaling Team's own weapons. The additional grenades also provide a larger store for emergencies. Medium or Light is critical for the mobility to always keep up with your **Gunner**. It allows for more mission flexibility. Fortified can also work.

Passive

Concussive
Padding

Extra
Padding

Weight

Medium

Light

Backpack

Recoilless Rifle Pack

Tactical Info

GL Targets: Voteless Horde, Fleshmob, Overseers.

GL Demolition Targets: explosive barrels, Lightning Spire/Tesla Tower, Cognitive Disruptor PSU, fences, crates, Illuminate barriers.

Stuns are very important to have is the shield grenade is not taken on the Whaling Team, if **Gunner** is unable to bring Stuns you must bring them instead.

While using the **GL** in the **FRV**, keep it pointed forward. The minimum safe distance is 15m. The grenades will ricochet off of your **Gunner's** Shield Generator Pack. Make sure that you have a clear shot when destroying outpost ships.

Supply Pack - Notify **Logistics** when the Supply Pack is off cooldown. This helps the **Logistics** keep YOU resupplied. Calling your Supply Pack early allows **Logistics** to use the remainder of their current Supply Pack to resupply the rest of the team. The redundancy of this Stratagem allows **Logistics** more flexibility. They can call in their Supply Pack stratagem alternating with yours or keep it in reserve for emergencies.

Shield Generator Relay - See SOP for usage. Always make sure that the **Spotter** is the first to deploy a Shield Generator Relay during a Leviathan Takedown. This gives the **Gunner** more time to acquire their target. Place Stratagem in location with best line-of-sight to the Leviathan.

Orbital Laser - While often a Flex Stratagem, the **Spotter** will always run it. This is because you will always be riding shotgun in the **FRV**. This allows **Spotter** to lean out and call in the Orbital Laser, quickly dispatching outposts of 2-3 ships.

[appx. 1, 6.1, 6.3, 6.4, 8.2, 9.1]

The Sailing Team

All through the history of Super Earth, we have coveted the fastest ships of our time. From the clipper ships of olde, to the FTL Super Destroyers. In your mission profile, the quickest craft by far is the FAST RECON VEHICLE.

As a member of the SAILING TEAM, you will be in charge of steering clear of hazards and navigating the ship for safe passage. Your cargo will be Supply Packs and one really pissed-off privateer.

Deliverance will be your mission.

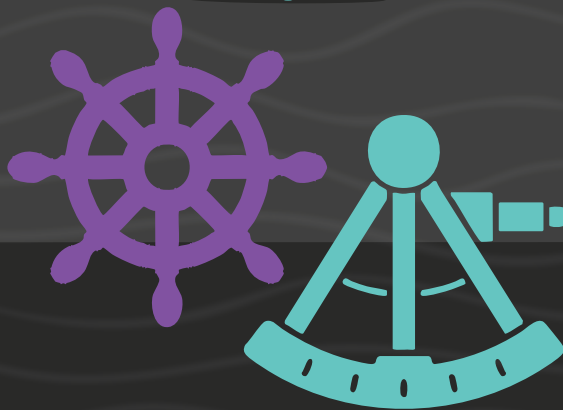

Information is your weapon.

The Illuminate will never know what hit them, and you'll be back in time for tea.

Logistics

Driver &
Navigator

Security

Threats

Avoid these when driving the FRV

Does damage to passengers while setting them alight

High damage beam can melt the FRV

[Click for Video](#)

Attacks Can Flip the FRV
Acts as a solid barrier

Can heavily damage the FRV in a single strafe

Can cause extreme damage to the FRV, often popping a tire

These obstacles within outposts, the Lighting Spire can wipe a team while, the Gazer can heavily damage the FRV. Both can be destroyed by [Spotter](#) with the GL

Parking

Avoid Parking near barrels

Avoid Parking in an open area

Alleys often work well

If the FRV is damaged or overrun after parking, it is better to find a safe place and drop a new one
Park in a position where the HMG turret is useful if possible, examples below.

General

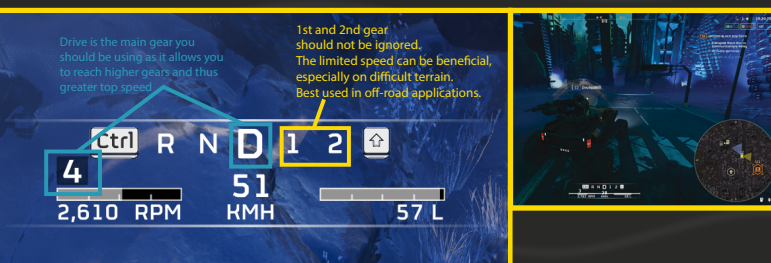

The handbrake can be used to turn the FRV quickly.

It is more important to be in control of the FRV than it is to be fast.

Flipping over or ejecting teammates slows you way down.

Try to keep the map visible to be able to orient yourself.

DO NOT try to be your own Navigator.

Solid

Solid, no matter the speed

Weak

All can be driven through at moderate speeds, but are solid at low speeds

Illuminate batteries

These will explode in high-speed collisions, killing passengers

Illuminate barriers

Can contain Hidden barrels

Can be driven through w/o blowing barrels

Illuminate can miss and hit a barrel causing, it to explode

Destroyed cars

Acts as a ramp at low speed
Able to be driven through at high speed but, will push away while driving through it, and explode after

Objectives

Park **FRV** in a central location that is easy to exit from.

Outpost

Determine the layout of the outpost, if there are Lightning Spire/barrels, and the number of ships.

If there are barrels in the way of the **FRV**, bring the **FRV** to a safe distance and direct **Spotter** to shoot the barrel by saying, "SPOTTER SHOOT BARREL FRONT/LEFT/RIGHT".

If there are Lightning Spires, direct **Spotter** to destroy the Lightning Spire by saying, "SPOTTER SHOOT LIGHTNING SPIRE FRONT/LEFT/RIGHT", while maintaining a safe distance.

If the outpost has 1 ship or is navigable with **FRV**, direct **Gunner** to shoot a ship saying, "LEFT/RIGHT SIDE STRIP SHIELD", while **Gunner** is shooting, position **FRV** for a clear door shot at a distance of at least 5m from the **Spotter's Grenade Launcher**.

If **Security** is **Navigator**, you can direct them to destroy a ship while **Gunner** and **Spotter** destroy a ship on the opposing side.

If the outpost has 2-3 ships and is impassable with the **FRV** or is overrun with hostile forces, direct a team member to throw an Orbital Laser at the outpost without exiting the vehicle.

Circle back later if the laser does not destroy all ships.

Takedown

Allow the team to dismount and park in a location safe from Leviathan nearby, then resume normal role.

Tips

Whenever parking the car make it clear you are stopping by saying, "DISMOUNT".

If in a safe location, **Security** should drop their **FRV** before **Logistics**.

When parking, drop off the squad in an advantageous position and park in a safe location ~50m away.

[appx. 2.4, 5.2, 5.3, 7.5]

Navigator's Guide

Pre-Mission

As **Navigator**, it is your job to determine where the squad will drop. This will give you a better idea of the map layout and squad orientation. Due to the squad's complex load-in, it is more important to drop clear of enemy forces and in an open area where **Watchers** can be put down quickly. The speed of the **FRV** allows dropping further from objectives.

If dropping into a Free the City mission, place the squad as close to the Monolith as possible. The **Gunner** will not have his **RR** until this objective is demolished with the Portable Hellbomb.

Transit

Determine the heading of the squad and direct them from objective to objective. Pin the map to direct **Driver**. Assist **Spotter** in watching for Leviathans. Tell **Driver** good entry points for Objectives. Ask what info **Driver** needs from you.

To help **Driver** be aware of what the next ping is as well as assess whether a drive-by drill or laser is more effective, you can check what side objective you have marked and the number of ships in an outpost from the map; examples of each are below.

[appx. 2.2, 4.1, 5.3, 8.1]

SEAF Artillery

SEAF SAM

Cognitive Disruptor

Lidar Station

1 Ship

2 Ships

3 Ships

Logistics SOP

Load-In

Call Anti-Materiel Rifle (AMR)/Stalwart and equip Supply Pack (from **Spotter**).

Transit

If **Driver**, See Driver's Guide.

If **Navigator**, See Navigator's Guide.

Objectives

On approach, find Watchers and eliminate them QUICKLY. Your job is to work the terminals and objective assets. Be ready to resupply **Spotter** if they begin engaging Leviathan.

Outpost

If **Driver**, see Driver SOP.

If **Navigator**, use Orbital Laser when directed by **Driver**. [appx. 9.1]

Takedown

If **Driver**, see Driver SOP.

Dismount when **Spotter** chooses a takedown location. Throw a grenade in a choke point to keep enemies from pressuring the Whaling Team. Help clear the shield relay area. Stay inside shield relay area.

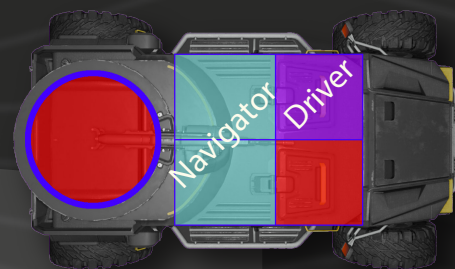

Act as secondary security for the Whaling Team, keep Voteless off of them, and call for **Security** if needed.

Listen to **Spotter's** pack count, resupply when **Spotter** says, "2". Pack will appear like this -->  Check the **Spotter's** RR Pack before leaving the shield relay area, and resupply as needed.

If **Security** says, "LEAVE", disengage from the hostile forces and mount the **FRV**.

If **Navigator**, determine the next objective and place a pin on the map. [appx. 6.1, 6.4]

Seat

Tips

Keep an eye on Supply Pack cooldowns for you and **Spotter**. If there is still ammo in the pack on call-in, resupply teammates based on need.

Call Super Destroyer Resupply when the team is in a solid position.

If you have a mostly spent Pack during a takedown make sure to notify the Whaling Team and instruct them to conserve ammo if possible.

[Click for Video](#)

[Click for Video](#)

Stratagems

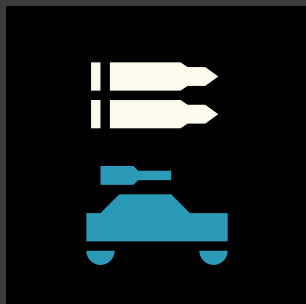

AMR/Stalwart

You need to kill Watchers. The AMR excels at this. Pair with a primary for chaff. Or run the Stalwart, but you must take a marksman's rifle.

Supply Pack

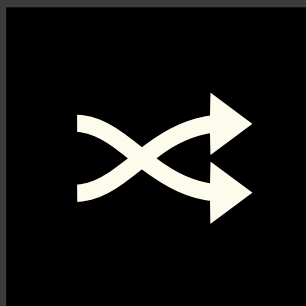

Spotter will call in your first pack, try to avoid calling your own. Use Super Destroyer Resupply to refill when practical.

Fast Recon Vehicle

It's the "W" in "MoW". Security will always call theirs first, yours is the ace in the hole.

Choose your timing wisely.

Flex Slot

Orbital Laser - If Navigator
Gas/EMS mortar - Area Denial
Eagle 500kg - For drops/utility
Tesla Tower - For zoning
Solo Silo - extra Levi damage

Logistics Loadout

Primary Options

	Diligence CS 1 High damage, Med pen, Precision Best Paired with a Stalwart Alternative(s): Deadeye Targets: Overseers, Watchers, Harvester Horns		Pummeler 2 Low damage, use grenades One-handed Alternative(s): Defender, Stoker Targets: Voteless, Watchers Stun Targets: Watchers, Overseers, Fleshmob		Punisher Plasma 3 High Damage Stagger and AOE Trades stun for lethality Targets: Voteless, Overseers, Fleshmobs Alternative(s): Breaker S&P, Tenderizer, Light Liberators
---	--	---	--	---	--

Grenade Options

	Gas 1 Area denial, is still passable Use in choke points on OBJ or during takedown. Alternative(s): Stuns
	Pryotech 2 Good area denial, but less traversable High damage, apply liberally Use stun weapons to hold enemies in AOE. Alternative(s): Incendiaries
	Frag 3 Simple and effective. Alternative(s): Dynamite or Impacts

Secondary Options

	Loyalist 1 1 charged breaks Cognitive Disruptor PSUs Good AOE but Ineffective at close range Targets: Voteless, Overseers, Fleshmobs Alternative(s): Missile Pistol
	Warrant 2 High damage, medium pen, tracking for Watchers, Fast reload and controllable Targets: Voteless, Overseers, Watchers Alternative(s): Verdict, Talon, Veto
	Stim Pistol 3 "Support loadout", best with medkit armor Stand still and crouch for better accuracy Shields mitigate usage Targets: Your friends

Armor

The Rock Solid armor passive prevents ragdolling while in the backblast of the RR. This enhances mobility around the Whaling Team during takedowns. Unflinching armor has greater survivability. It gives Navigator more map info. Extra Padding is noteworthy for general survivability, Medkit is for Stim Pistol users.

2 Rounds Best time to resupply		
1-0 Rounds WILL BE FLASHING Resupply now		

Tactical Info

AMR Targets: Watchers, Overseers, Stingray, Harvesters, Fleshmob, Tesla Towers
Slatwart Targets: Voteless, Fleshmobs

Supply Pack - Keep an eye on cooldown for both yours and Spotter's Supply Packs. You can decide if you want to alternate with Spotter and call in one every 4 min, or keep yours in reserve this can be useful for engaging multiple Leviathans simultaneously or other emergency situations. See left for additional info.

FRV - Keep an eye on the cooldowns. If you can keep the FRV safe enough that another isn't needed, keep yours in reserve, and tell Security to call in their second. Otherwise use as needed. Always call in your FRV AFTER objectives are completed, as unattended vehicles are at risk of damage.

FLEX STRATAGEMS

Orbital Laser - Great option for outposts from the FRV as Navigator.

Gas/EMS mortar - Gas is preferred, deploy at takedown sites and objectives.

Eagle 500kg Bomb - Useful for engaging drops and bases.

Tesla Tower - Deploy tower 50m from the squad. This is the MoW alternative to a turret. It does not affect the shield relay and if used correctly, will not harm the Whaling Team.

Solo Silo - Can assist Whaling Team in different way, see appx. 3.5 for proper use. [appx. 1, 2.1, 3.1, 3.1, 3.3, 3.4, 3.5, 6.2, 8.3, 9.1]

Security SOP

Load-In

Call in the first **FRV** in a safe location and call in **Autocannon (AC)**.

Transit

If **Driver**, See **Driver's Guide**.

If **Navigator**, See **Navigator's Guide**.

Seat

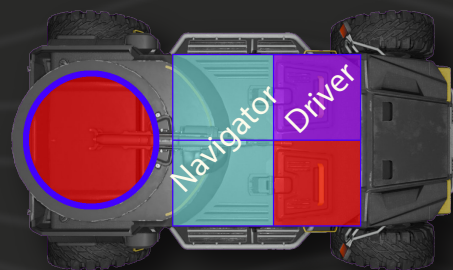

Objectives

On approach, find **Watchers** and eliminate them **QUICKLY**.

Clear objective of hostiles and guard the objective area, ask for assistance if required. Kill **watchers QUICKLY**. [appx. 4]

If reinforcements are called, place **Tesla Tower** in a choke point and request help from **Logistics**.

If overwhelmed, say, "LEAVE" and direct them to **FRV** while providing covering fire.

Outpost

If **Driver**, see **Driver's guide**.

If **Navigator**, use **Orbital Laser** or **(AC)** when directed by **Driver**. [appx. 9.1]

[Click for Video](#)

Takedown

If **Driver**, see **Driver SOP**.

Dismount when **Spotter** chooses a takedown location.

Throw grenades in choke points to keep enemies from pressuring the **Whaling Team**.

Call in **Tesla Tower** 50m from the **Whaling Team** to zone out incoming hostiles.

Help clear the shield relay area, then move to the perimeter to keep enemies from breaching the shield relay area.

Act as **Primary** security for the **Whaling Team**, keep hostiles off of them, and call for **Logistics** if needed.

While the team is engaging the **Leviathan**, keep **watchers** from calling reinforcements.

If reinforcements are called or the takedown position is about to be overwhelmed, communicate to the team that it is time to: "LEAVE".

Disengage from the hostile forces and mount the vehicle.

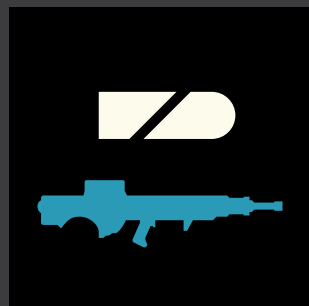

If **Navigator**, determine the next objective and place a pin on the map.

[appx. 6.1]

Stratagems

Autocannon

If there was ever a support weapon for Illuminate, this is it. Flak deletes Fleshmobs, Stingrays and anything else you need gone.

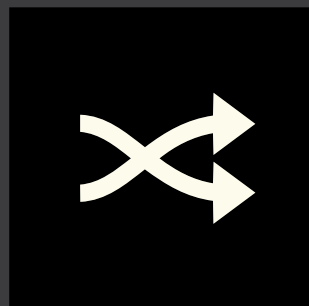

Fast Recon Vehicle

Always call in the first FRV when loading in. This vehicle will help you keep the squad safe when you need a quick getaway.

Tesla Tower

Helps to zone for the Whaling Team and cover your flank. Just don't roast your protectees, MINIMUM safe distance is 50m.

Flex Slot

Orbital Laser - If Navigator
HMG Emplacement - For drops/OBJ
Gas/EMS mortar - Area Denial
Eagle 500kg - For bases/drops

Security Loadout

Primary Options

Variable	Diligence CS	Adjudicator
 1 Highest DPS, Flexible Can engage Fleshmobs without risk of injuring teammates using volley/total modes Targets: Fleshmobs, Voteless, Overseers	 2 High damage, Med pen, Precision Enhanced ergo with peak physique Alternative(s): Amendment, Deadeye, Diligence, Targets: Overseers, Watchers	 3 High damage Bad ammo economy Alternative(s): MA5C, Coyote, Liberator Penetrator Liberator Penetrator trades damage for better ammo economy Targets: Voteless, Overseers, Watchers

Grenade Options

 1 Fire creates good area denial, but is less traversable High damage, apply liberally Alternative(s): Incendiaries, Gas	 2 Controls the flow of enemies High damage Lack of throw distance, so must plan	 3 Huge radius, high damage, & visible to team Cook it for better results Alternative(s): Frags, Impact
---	---	--

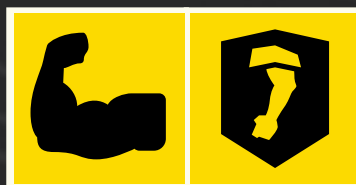

Secondary Options

 1 High damage, medium pen, good hipfire Great ammo economy Targets: Voteless, Overseers, Watchers	 2 High damage, medium pen, tracking for Watchers, Fast reload and controllable Alternative(s): Verdict, Peacemaker, M6C Targets: Voteless, Overseers, Watchers	 3 Hatchet, Saber, Machete, or Stun Baton Synergizes with armor passives Keeps you in the fight without reloading
---	--	--

Armor

Longevity in the fight and ability to quickly engage is paramount. Peak Physique armor passive allows for rapid acquisition with long guns and AC, better melee keeps you in the fight longer. Reinforced Epaulettes has similar melee damage and faster reloading, and thus gives more uptime on primary.

Passive

Peak
Physique

Reinforced
Epaulettes

Weight

Heavy

Medium

Backpack

Autocannon Pack

Tactical Info

AC Flak Targets: Fleshmob, Stingray, Voteless Horde, Elevated Overseer, Watcher, Outpost Shields

AC APHET Targets: Harvester (leg joint), Overseer (head), Lightning Spire, Tesla Tower, Outpost Doors

Never let your Autocannon go completely empty. Always try to reload after firing 5 rounds. This will speed up your reloads greatly and keep you in the fight.

FRV - During loadout always call in your FRV first. Never call in your FRV after loadout unless directed specifically by Logistic. Don't let your FRV be collateral in your bloodthirst for the Illuminate.

Tesla Tower - The Tesla Tower can wipe an ENTIRE TEAM in an instant if misplaced. DO NOT place a Tesla Tower within 50m of squad. It will zone as well, if not better, than a turret if placed properly. The Benefit over a turret is it will not stray fire into the Whaling Team or their Shield Generator Relays.

FLEX STRATAGEMS

Orbital Laser - Great option for outposts from the FRV as Navigator.

HMG Emplacement - Very effective at engaging drops because of its ability to kill multiple Harvesters quickly. Also can be used by the Gunner on objectives.

Gas/EMS mortar - Gas is preferred, deploy at takedown sites and objectives.

Eagle 500kg Bomb - Useful for engaging drops and bases.

[appx. 1, 2.1, 3.1, 3.1, 3.2, 3.4, 3.6, 6.2, 8.4, 9.1]

Emergency SOP

Improper Tesla Tower placement

Call it out before it lands

Lay down

Shoot the f out of it

Minimum safe distance is 50m GET IT IN YOUR HEAD

Recoilless issues (failure to load/fire)

Spotter drops and picks up the pack, then attempts to team reload again

Gunner switches on and off RR

When the last round in the RR pack is loaded you will automatically detach so ensure that you are still attached

If all else fails call a new RR from the Super Destroyer

How to recover when a role dies

Gunner Dies

Logistics picks up RR and assumes role

Every three shots split and Logistics resupplies Spotter

Spotter Dies

Logistics picks up RR pack

if need extra shots Gunner picks up supply pack

Every three shots split and gunner resupplies Logistics

Logistics Dies

Gunner picks up supply pack

Every three shots split and Gunner resupplies Spotter

Security Dies

In most cases GTFO

If Security out of position Logistics picks up the slack

Spotter drops GL, Logistics picks up GL

If 2 people Die

GTFO in the FRV, call in reinforcements and new gear when safe.

What to do when the FRV is flipped

Gunner fires crossbow at surface 2m-4m away from the FRV.

Security can also use AC set to APHET

Stratagem stuck to the Shield Generator pack

Unequip pack and stand clear or get squished

Treats on Tracks

Treats on Tracks is a variation of Meals on Wheels where the FRV is substituted for the Bastion. It is still a hit-and-run strategy, just with more hit and less run.

Anything not explicitly changed is the same as traditional MoW

It is recommended that you become experienced in the traditional method

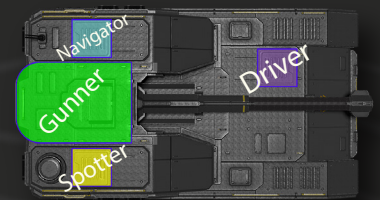

Before trying Treats on Tracks. Treats on Tracks is a challenge variation

The Bastion

With 8k health, the Bastion has 4x the health of the FRV and much greater offensive power, a 120mm HV cannon with 31 rounds and a coaxial HMG with 2k rounds, at the cost of speed. Due to this and other factors, Logistics as Driver can be more effective because the Bastion does not need to be protected as much. To the Right is the new seating chart.

The Bastion is also completely enclosed, protecting passengers from any explosions, Tesla towers, or any incoming fire.

For Navigator and Spotter, it is best to mount by climbing the sides near the ladder (pictured right), to avoid running in the way of Gunner.

Offensive Power

The Bastion can take down Leviathans in 5-7 shots from it's 120mm HV cannon. Distance is required as the cannon can only tilt roughly 25 degrees up.

Reinforcement Warships can also be eliminated by stripping the shield with the coaxial HMG and a round from the 120mm HV cannon.

The Bastion can also destroy landed Warships by stripping the shield with the coaxial HMG and a round from the 120mm HV cannon through the door or two rounds to the outer shell.

SOP Changes

The first and most important change is that Leviathans can be eliminated from the Bastion. Because there are two forms of takedown, they are now referred to as: **dismount/traditional takedown**, which uses the **Recoilless Rifle**, and **cannon takedown**, which uses the Bastion's 120mm cannon. When starting a takedown, **Spotter** will still call, "ENGAGE", but this does not mean exit the Bastion. **Driver** will respond with, "DISMOUNT/CANNON", depending on which takedown is best. In the case that **Gunner** can no longer aim high enough to fire upon a Leviathan, they can also call, "DISMOUNT". If the **dismount takedown** is used, the Traditional SOP applies, with the exception of the Bastion not needing to be placed in a safe area.

During a **cannon takedown**, **Driver** will maneuver the Bastion so **Gunner** can simply kill a Leviathan by firing upon it with the 120mm shells. If the Bastion is expected to stay stationary, **Spotter** should call a shield relay to block some damage.

To the right is a clip showing a cannon takedown.

When **Driver** decides whether to engage with a **dismount takedown** or a **cannon takedown**, the main factors are distance and the number of Leviathans. At further distances, **cannon takedown** is better as the 120mm cannon has slightly more damage, allowing more falloff without affecting the rounds needed to kill. On the flip side, the elevation of the 120mm cannon is limited, meaning that at close range, a **cannon takedown** is not possible. Secondly, the Bastion's 120mm cannon has a much slower rate of fire, so if more than one Leviathan needs to be engaged, a **dismount takedown** is preferred.

The second change is the drive-by drill, as there are now 4 ways to approach.

1. **Gunner** can strip the shield with the **coaxial HMG** and fire a round from the 120mm HV cannon through the door of the Warship.
2. **Gunner** strips the shield with the **coaxial HMG** and fires two 120mm HV rounds upon the outer shell of the Warship, this is best if the door is not visible/accessable.
3. **Spotter** or **Security** strips the shield with their primary and fires a round from the **GL/Autocannon** through the door.
4. **Spotter** fires an Ultimatum round to hit the outer shell.

To the right is a clip demonstrating each method.

Different situations necessitate different methods.

Driving and Additional Notes

Driving Notes

The **Bastion** has similar controls to the **FRV**, but notable differences are that the handbrake does not allow you to drift; it simply stops the **Bastion** very fast at any speed. The **Bastion** can turn without moving forward or backward, simply by holding left or right while stationary.

While **FRV** struggles to navigate the destroyed streets, the **Bastion** can easily drive over most obstacles. Due to this, keeping to the center of roads is recommended. The only threat on the streets is the **Illuminate** barriers, as the **Bastion** will break the barrels within and take a large amount of damage. This can be avoided by **Spotter** firing the **GL** upon any **Illuminate** barriers.

The largest threat to the **Bastion** is a **Stingray**, as it does not have the speed to evade in most cases, and 3 strafes will kill a **Bastion** from full health.

Additional Notes

Loadouts are unchanged, with the exception the **FRV** being subbed for the **Bastion**, an option for an **Ultimatum** for **Spotter's** secondary, and **Security's** loadout flexibility in terms of support weapon being reduced due to the extreme threat **Stingrays** pose.

Additional info found here (entries 5-7 are on next page)

Relevant Appendixes: **Gunner** [1, 2.1, 2.3, 3.3, 3.6, 3.7] **Spotter** [1, 2.3, 4] **Driver** [2.4] **Navigator** [2.2, 4.1] **Logistics** [1, 2.1, 3.1, 3.3, 3.4, 3.5, 3.6, 3.7] **Security**: [1, 2.1, 3.1, 3.1, 3.2, 3.6, 3.7, 4]

1 Boosters

- 1.1 We have not included boosters in the main body of this Guide. Boosters for the squad will usually be chosen based on planetary modifiers and DSS activity.
- 1.2 The standard spread of Boosters is Hellpod Space Optimization (**Logistics**), Dead Sprint (**Gunner**), Vitality Enhancement (**Spotter**), and Experimental Infusion (**Security**).
- 1.3 If the planetary modifier is Blizzards or Sandstorms, you can take Muscle Enhancement instead of Dead Sprint.
- 1.4 If the DSS is present and Muscle Enhancement is not needed, Stamina Enhancement should be taken.

2 Mission Parameters

- 2.1 On a Blitz mission every flex stratagem should be the Orbital Laser, 500kg, or Orbital Gas Strike (ordered from most effective to least effective).
- 2.2 With the Ion Storm planetary modifier, **Navigator** should ask the squad to pin upcoming objectives so that they appear on your compass while the map is jammed. Thinking ahead here is key!
- 2.3 If stratagems are jammed and the Whaling Team cannot place a Shield Generator Relay, they **MUST** engage the Leviathan AS QUICKLY AS POSSIBLE if it threatens the squad.
- 2.4 Mega cities can vary in difficulty based on the campaign type; defense Mega Cities are much easier to drive on than liberation Mega Cities.

3 Flex Stratagems

- 3.1 Orbital Gas Strike is much less effective on Mega City maps due to the need for repositioning.
- 3.2 The HMG Emplacement is very effective for **Security**. In combination with Tesla Tower and good positioning, it can contain an entire drop. It shores up **Security's** ability to engage Harvesters and does not need reloading.
- 3.3 Avoid having 3 Tesla Towers in a team.
- 3.4 The Expendable Napalm is also quite effective, especially on city maps. Aim for a wall 20-30m above your target for a greater spread. It can also one-shot Fleshmobs in a pinch.
- 3.5 The MS-11 Solo Silo does massive damage, this stratagem can greatly reduce the strain on the **RR's** ammo supply and reduce takedown times. Just make sure to place it away from the whaling team during a takedown. Aim center mass for the most damage.
- 3.6 Flame sentries can also be effective. Usage is similar to Tesla towers with a lesser minimum distance.

4 Cognitive Disruptor

- 4.1 The Cognitive Disruptor greatly inhibits the deployment speed of Shield Generator Relay, making it a priority target.
- 4.2 While in TRANSIT, it is the **Spotter's** duty to engage the Disruptor with the **GL**. Other team members will stay clear unless called.
- 4.3 While on an OBJECTIVE, it is the **Security's** duty to engage a nearby Disruptor with the **AC**. This keeps the Whaling Team together on OBJ.

Additional info found here (entries 8-9 is on next page)

Relevant Appendixes: **Gunner** [5, 6.1, 6.3, 6.4, 7] **Spotter** [5.1, 5.4, 5.5, 6.1, 6.3, 6.4, 7] **Driver** [5.2, 5.3, 7] **Navigator** [5.3] **Logistics** [6.1, 6.2, 6.4] **Security**: [6.1, 6.2]

5 Shield Generator Pack

- 5.1 Stratagem beacons will stick to the Shield Generator Pack, do not throw stratagems on your **Gunner**!
- 5.2 The Shield Generator Pack is critical for protecting the **FRV** and its occupants, always mount-up with it equipped.
- 5.3 The rear of the **FRV** has full cover from the Shield, the sides have half cover, and the front has limited cover (**Gunner** and **Navigator** only).
- 5.4 **Grenade Launcher** will ricochet off of **Gunner's** Shield Generator Pack.
- 5.5 During a takedown, the Shield Generator Pack will protect the Whaling Team from Stingray strafes, do not break if targeted.
- 5.6 The time until regeneration of the Shield is 12 seconds if it is destroyed. It is 60 seconds if it is only damaged. It can be useful to get a teammate to pop your bubble during downtime to have a full health bubble later.

6 Shield Generator Relay

- 6.1 Do not throw Stratagems (e.g. Resupply, Support Weapons) into the Shield Relay area. Two stratagems are enough to break it.
- 6.2 Do not throw the 500kg Bomb within 50M of the Relay area. It will catch on the top of the Relay and kill everyone inside.
- 6.3 Whaling Team should focus on keeping the team covered with Shield Relays whenever on objectives or during takedowns.
- 6.4 A single Shield Relay will block 12 Leviathan cannon rounds. If the Shield is hit with a Hellpod, it will only block 5 cannon rounds.

7 Leviathan

- 7.1 If the Leviathan is flying directly towards you or directly away from you, do not attempt to hit different parts. Simply hit the same part until it breaks and target the main body. This will normally result in a 6 shot takedown.
- 7.2 While under pressure, it is common to forget which part you have already hit. You can use the back fins as an indicator in this situation. While losing out slightly on damage, if they have not been broken, you know that they haven't already been hit.
- 7.3 When engaging the Leviathan is at long ranges is it best to try to hit the Leviathan in the same part until it falls. This will help reduce missed shots by going for different parts.
- 7.4 When Leviathan is moving between buildings, just hit the visible parts. Often, buildings have larger hitboxes than what is visible.
- 7.5 The best way to takedown a Leviathan in Transit is to intercept it. Learn to predict where the Leviathan will be and deploy the Whaling Team there.

Additional info found here

[Gunner](#) [8.1] [Spotter](#) [8.2, 9.1] [Navigator](#) [9.1] [Logistics](#) [8.3, 9.1] [Security](#): [8.4, 9.1]

8 Alternative Loadout Items

8.1 [Gunner](#) Primary Info

The One-Two and Suppressor can also do well but can struggle with ammo
The Trident and Sickle can avoid needing resupplies for primary ammo, the Trident is best.

8.2 [Spotter](#) Loadout Info

Sta-11, M7S, Gallant, and Liberator Carbine are direct alternatives to the knight.
The Ajudicator, MA5C, Liberator Penetrator, and Reprimand are medium penetration options.
The Variable, Coyote, and Pacifier provide utility.
The Ultimatum can be very effective, it is best you have experience before using it.

8.3 [Logistics](#) Loadout info

The Trident and Sickle can avoid needing resupplies for primary ammo, the Trident is best.
The total loadout is very flexible; many support and primary options can be used, but the most differing loadout is Diligence CS with a [Stalwart](#). The Idea is to have a long-range(Watchers) weapon with a short-range pairing(Voteless). Stun/stagger is highly recommended. A ranked list of support weapons from most recommended to least: [Anti-Materiel Rifle](#), (Medium) [Machine Gun](#), [Laser Cannon](#), [Stalwart](#), [Heavy Machine Gun](#). For armor many passives are effective including Rock Solid (RR can no longer ragdoll you), Engineering Kit(when paired with an [MG](#)), or Peak Physique (Better [AMR](#) handling).

8.4 [Security](#) Loadout Info

The Trident and Breaker Spray and Pray work well in clearing crowds fast but struggle against Watchers.
The total loadout is very flexible; many support and primary options can be used. Your flex slot can even be used for a backpack, but you must ensure you can still kill Fleshmobs, Voteless and Watchers quickly.

9 Misc

9.1 Steps to call stratagems from car

1. Aim to lean out
2. Hold stratagem key (this will keep you leaning out of [FRV](#))
3. Enter stratagem code
4. Throw stratagem
