

Shock and Swarm

Created by Undeadender
With Inspiration from InvisoBill and FunctioningCyber

The Automaton menace believes itself invincible, but Super Earth knows better.

Two Helldivers alone are enough to give them shivers down their steel spines; you will be those Helldivers.

As a duo, you will SHOCK their heaviest units and SWARM the weakest with beautiful machine gun fire.

Take your Recoilless Rifle and Machine Gun and deliver these mindless Automations to Super Earth as nothing but more metal for our war machine.

What is Shock and Swarm?

Shock and Swarm is a 2-player strategy that can be run in parallel with itself. The goal of the team is to be a strike force capable of fortifying a position while remaining mobile. It's most effective when run in parallel, allowing the bot drops to be traded to make the other team encounter less resistance on difficult objectives. Each team itself is made of two members, Shock and Swarm. In its essence, Shock is Anti-Tank and Swarm is Anti-Chaff.

The team must stay together and communicate.

It is important that you pay attention to your teammate as much as you do enemies.

Backpack Trading

The trading of the **Recoilless Rifle** and **Supply Packs** is vital for the most effective. **Split**, **Shock** as the **Recoilless Pack** and **Swarm** the **Supply Pack**, is best when entering a fortified side objective or outpost. **Stick**, **Shock** has the **Supply Pack** and **Swarm** the **Recoilless Pack**, is best when guarding an area or objective and when moving throughout the map, as it ensures the team stays together and capable of eliminating a bot drop or heavy resistance. It can be helpful say, "Can we **Split/Stick**?", to indicate to your partner when you want swap packs.

Loading The Recoilless

When in **Stick**, it is possible to team reload the **Recoilless Rifle**. While team reloading, **Swarm** must count the amount of rounds in the **Recoilless Pack**, "3, 2, 1, OUT". At the same time, **Shock** must load more rounds in the pack when there is downtime, and there are two or fewer rounds in the **Recoilless Pack**. To the right, there is a chart showing the number of rounds in the pack from the HUD and a Video Showing the team reload in action.

Recoilless Rifle Pack States

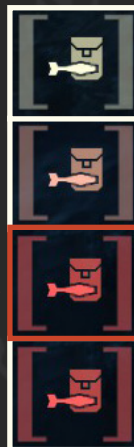

Supply Pack will resupply 3 recoilless rounds.

4-5 Rounds
Do not resupply unless in excess

3 Rounds
Do not resupply unless in excess

2 Rounds
Best time to resupply

1-0 Rounds
WILL BE FLASHING
Resupply now

Recoilless issues (failure to load/fire)

Swarm drops and picks up the pack, then attempts to team reload again

Shock switches on and off **Recoilless Rifle**

When the last round in the **Recoilless Rifle Pack** is loaded you will automatically detach so ensure that you are still attached

If all else fails call a new **Recoilless Rifle** from the Super Destroyer

Running Two Teams in Parallel

Running this strategy in parallel with itself makes it even more effective if the teams work together. It is best if the teams split up to cover more ground. To be able to help each other while on opposite sides of the map, each team should attract a bot drop when the other team is entering a difficult objective (Jammer, Detector Tower, Fortress, or other fortified objectives). This prevents the team on the objective from getting a drop and will make their life a hell of a lot easier, while the team that pulled the drop away can simply run from the drop.

Shock

Weapons and Armor

As the anchor for the [Recoilless Rifle](#) platform, you should choose heavier armor sets; [heavy](#) and [medium](#) are preferred. [Fortified](#) and [Extra Padded](#) help you stay alive, and [Siege-Ready](#) helps you survive on fewer resupplies, allowing [Swarm](#) with the [Recoilless Pack](#) to keep the output of the team high.

You must rely on your primary much more than [Swarm](#), so high ammo is incentivized the Automatic weapons are most effective([assault rifles](#), [SMGs](#), [Sickles](#), or the [Scythe](#)) Secondary is mostly up to choice; the medium penetration secondaries are most effective([Talon](#), [Warrant](#), and [Verdict](#)).

Grenades are similar, [Gas](#) is always good, [Pyrotechs](#) and [Frag](#)s are good due to getting a large number.

Stratagems

[Recoilless Rifle](#) - This is the team's best way to eliminate drops and outposts. Allowing you to destroy outposts from a distance and preventing the bots from reaching the ground unscathed.

[Shield Relay](#) - Protecting the team from fire, especially a factory strider or other high-damage or ragdolling sources. This is the castle walls to your trebuchet.

Other stratagems

[Eagle 500kg/airstrike](#) - Good for stray patrols or fabricators.

[Orbital Laser](#) - A panic button or easy bot outpost wipe

[Orbital 120mm/380mm/Walking Barrage](#) - clear an area or destroy most of an outpost.

[Gas strike](#) - Good for softening areas and can destroy a stray fabricator if needed.

[Anti-Tank Emplacement](#) - A [Recoilless](#) you can use solo

[Autocannon/Rocket Sentry](#) - These sentries act as a teammate for automated heavy support

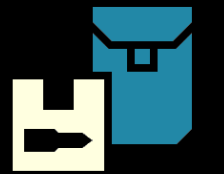

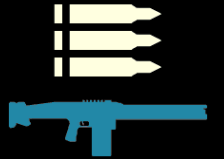

Role Responsibilities

[Swarm](#) relies on you to eliminate heavy targets; you must stay close to them. As [Shock](#), it is best that you keep your head on a swivel, eliminating targets from a distance, and keep [Swarm](#) aware when your [Recoilless](#) is empty.

During a drop, you should place a Relay away from the area the bots are landing, throw an orbital barrage where they are landing if possible. If [Swarm](#) says, "[Break](#)", help them clear the area until it is safe.

The [Recoilless Rifle](#) rounds have drop, see image right for the reticle holdovers.

Weapons and Armor

Armor should stay on the lighter side. At a minimum, you should be as heavy or lighter than **Shock**; **light** and **medium** are preferred. For passives, **Peak Physique** is for greater weapon maneuverability, **Fortified** is always a good on bots, and **Unflinching** is for scouting and survivability.

Explosive weapons are preferred. The **Crossbow** and **Eruptor** are best as they can destroy fabricators; the **Purifier** or **Punisher Plasma** also work.

Secondary is mostly up to choice; the medium penetration secondaries are most effective (**Talon**, **Warrant**, and **Verdict**).

Grenades are similar, **Gas** is always good, **Pyrotechs** and **Frag**s are good due to getting a large number, and **Thermite** can be a lifesaver if you are separated from Shock.

Stratagems

Machine Gun/Other - It is best to have a high rate of fire support weapon for suppressive fire and output.

Supply Pack - This belongs to the team and will be traded as needed, but in most cases, it should be on Shock's Back

Other stratagems

Eagle strafe/500kg - Good for stray patrols or fabricators.

Orbital Laser - A panic button or easy bot outpost wipe

Orbital 120mm - clear an area or destroy most of an outpost.

Gas strike - Good for softening areas and can destroy a stray fabricator if needed.

Orbital Airburst Strike/Gatling BarrOOOage - Good for softening areas or wiping patrols.

HMG Emplacement - A suped up machine gun for area defence.

Machine Gun/Gatling Sentry - These sentries act as a teammate for automated light support.

Role Responsibilities

Due to **Shock** only having their primary and grenades for chaff clear, it is your responsibility to take care of chaff. **Swarm** is also expected to be much more mobile when entering an outpost or side objective; you should enter first, but don't leave **Shock** behind.

During a drop, you will stay attached to **Shock** and detach when hostiles get too close; a **Sentry** can help prevent this. If you do need to detach, say "**Break**".

At all times, you should ensure that **Shock's Recoilless** is loaded.
