Rev 3.0.1

Meals on Wheels

(Team) Reloaded

Created by InvisoBill, FunctioningCyber, and Undeadender
With support from Kai's Commandos

It has been a long road to get here…

Many brave helldivers have given their lives, honing the tactics to fight the deadliest Illuminate threat.
Because we have culled their numbers, they hide like cowards among the skyscrapers. But make no mistake, the terrible and deadly LEVIATHANS still roam our cities.

They have upgraded their technology.
But SO HAVE WE.
With this REVISED STRATEGY and UPGRADED EQUIPMENT you will stamp them out like the scourge that they are.

MoW Overview

Fast moving and heavily armored, the LEVIATHAN requires special equipment and tactics to hunt.

In this strategy you will use:
Recoilless Rifle (RR): Your LEVI hunting weapon platform
Supply Pack (SP): Keeps the RR loaded for fast takedowns
Autocannon (AC): Keeps the team safe from ground patrols
Supply FRV (FRV): Enables the squad to attack LEVI from ambush and keeps SP fully loaded.

Meals on Wheels requires that every player fulfill the duty of their role.
DO NOT ATTEMPT this strategy if even one player is not fully committed to coordinated teamplay. This guide has been crafted to give you the best information from the front lines, to better onboard new sailors to the strategy.

Color Key

[White Text] - Important info and key comms
[Red Text] - Orbitals/eagles and danger warnings
[Blue Text] - Support weapons and backpacks
[Green Text] - MoW roles and emplacements/sentries
[Purple Text] - Relating to Driver and FRV/Maelstrom
[Light Blue Text] - Relating to Navigator

Your Target

Know thy enemy…

All who have encountered the LEVIATHAN before, and lived to tell about it, know it well. It terrorizes our Helldivers and SEAF forces alike; many believe it to be an insurmountable threat. Using this strategy, you will bring the fight to these autocratic behemoths!

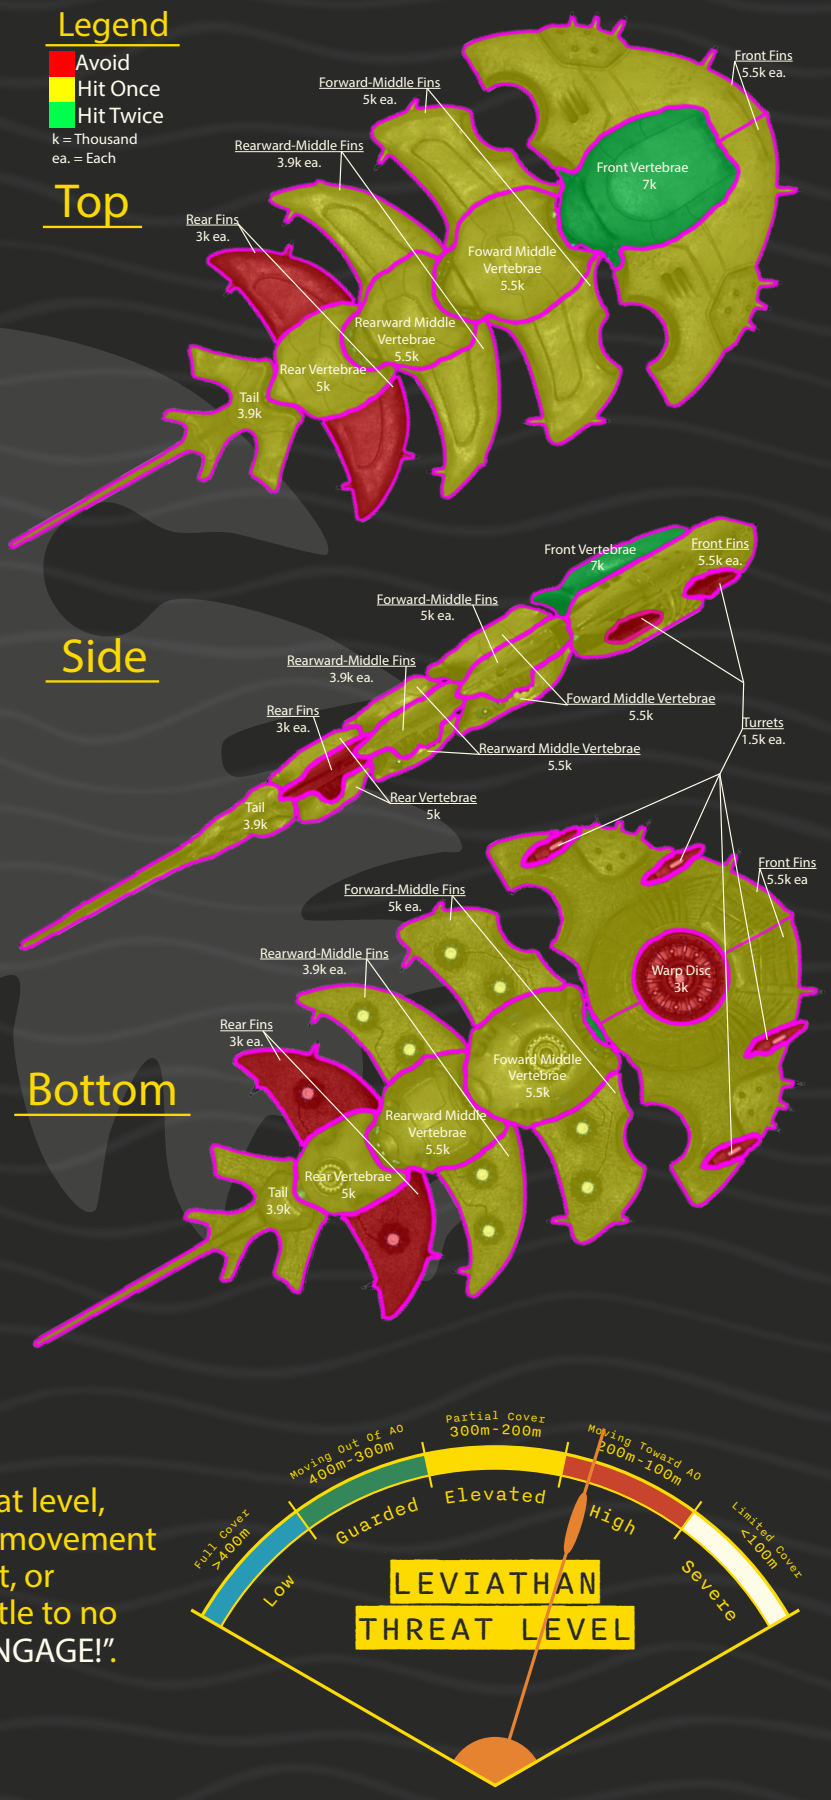

The first aspect of these creatures is their speed. They move deceptively fast. You will use the FRV to overtake them and set up your AMBUSH point(see PHASE 1: AMBUSH). Placing your squad in the path of the LEVIATHAN with open sightlines will give your RR the largest possible window for your ATTACK.

Second, their laser cannons are accurate and fast, dealing heavy damage that will light you on fire. Your best defense is the Shield Generators. The RR will bring Shield Grenades, and SP will bring Shield Generator Relay. They will drop them simultaneously to initiate the ATTACK (see PHASE 2: ATTACK). The grenades cover the RR & SP while the relay deploys, which will cover the rest of the team/FRV.

Finally, the LEVIATHAN is heavily armored and requires massive damage to eliminate. The RR requires 5-8 shots to SPLASH a LEVIATHAN. Any hits to the laser cannon will destroy them, but it deals no damage to the main health. Ricochets are common and considered a miss. Hitting your target is more important than hitting a specific spot.

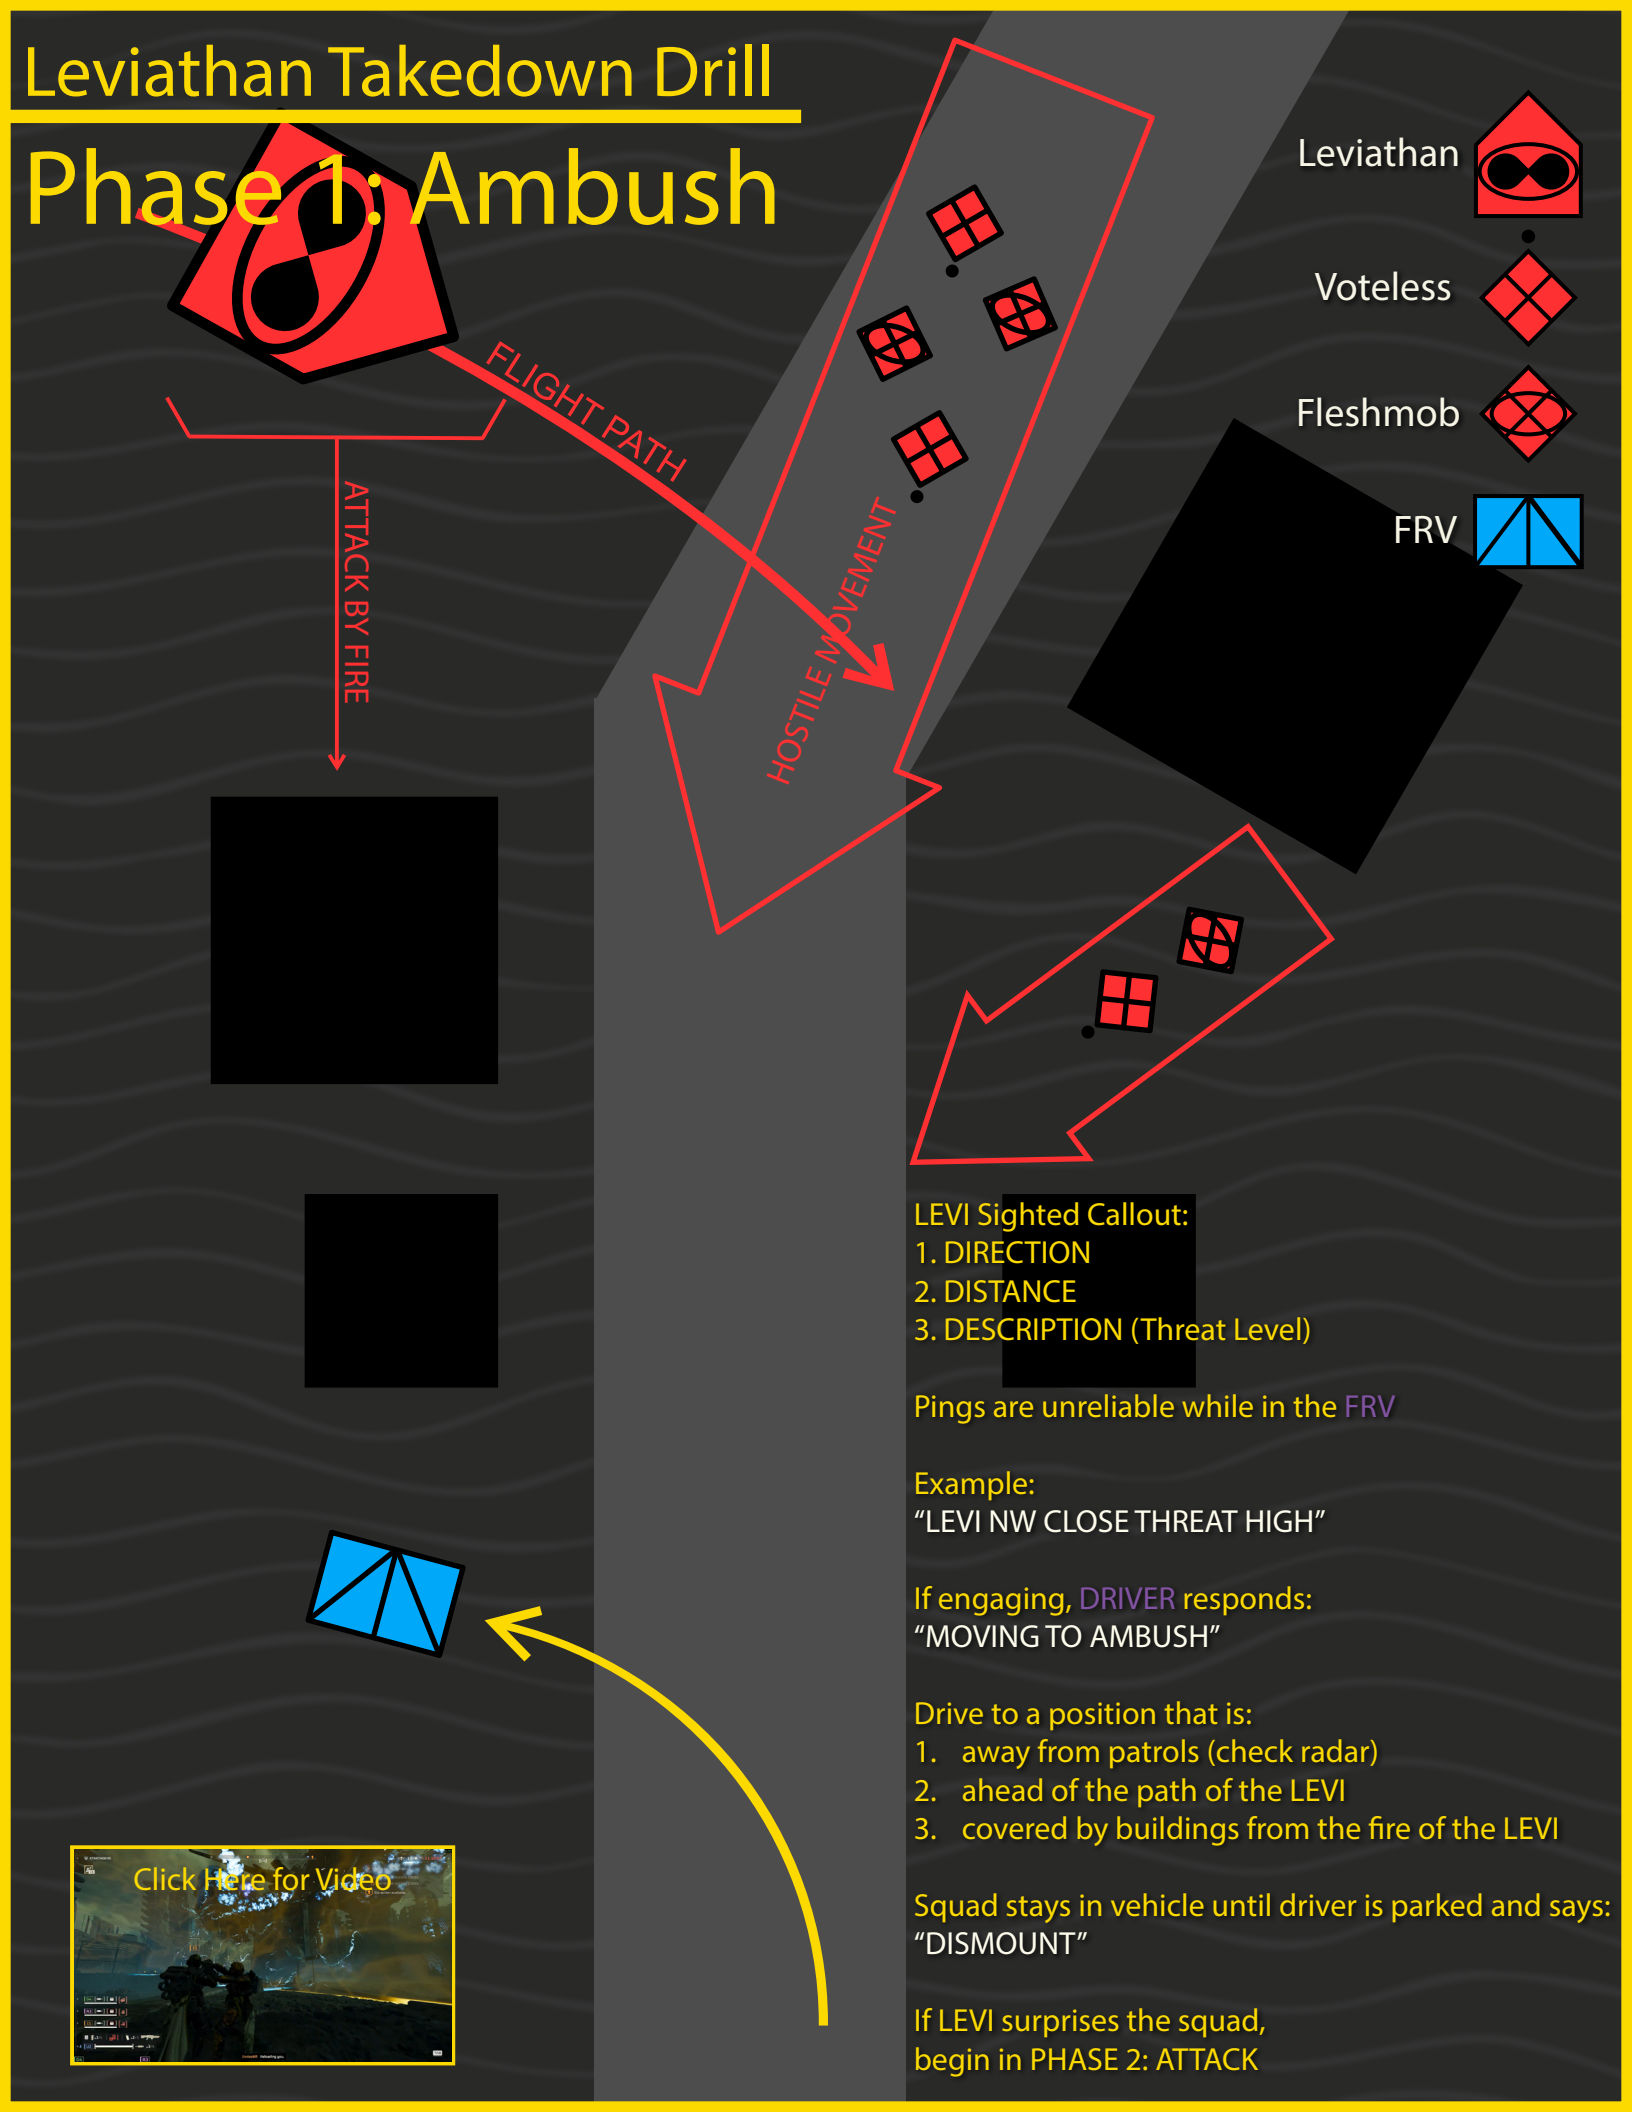

The gauge on the right displays the Leviathan's threat level, calculating danger based on its cover, distance, and movement path. Threat levels range from Low (full cover, distant, or retreating) to Severe (imminent, close range, with little to no cover). The needle is at High, meaning it's time to "ENGAGE!".

Diagram below shows hitboxes and health pools. They are color-coded to show the ideal number of hits.

Leviathan Takedown Drill

Phase 1: Ambush

LEVI Sighted Callout:
1. DIRECTION
2. DISTANCE
3. DESCRIPTION (Threat Level)

Pings are unreliable while in the FRV

Example:
"LEVI NW CLOSE THREAT HIGH"

If engaging, DRIVER responds:
"MOVING TO AMBUSH"

Drive to a position that is:
1. away from patrols (check radar)
2. ahead of the path of the LEVI
3. covered by buildings from the fire of the LEVI

Squad stays in vehicle until driver is parked and says:
"DISMOUNT"

If LEVI surprises the squad,
begin in PHASE 2: ATTACK

Leviathan Takedown Drill

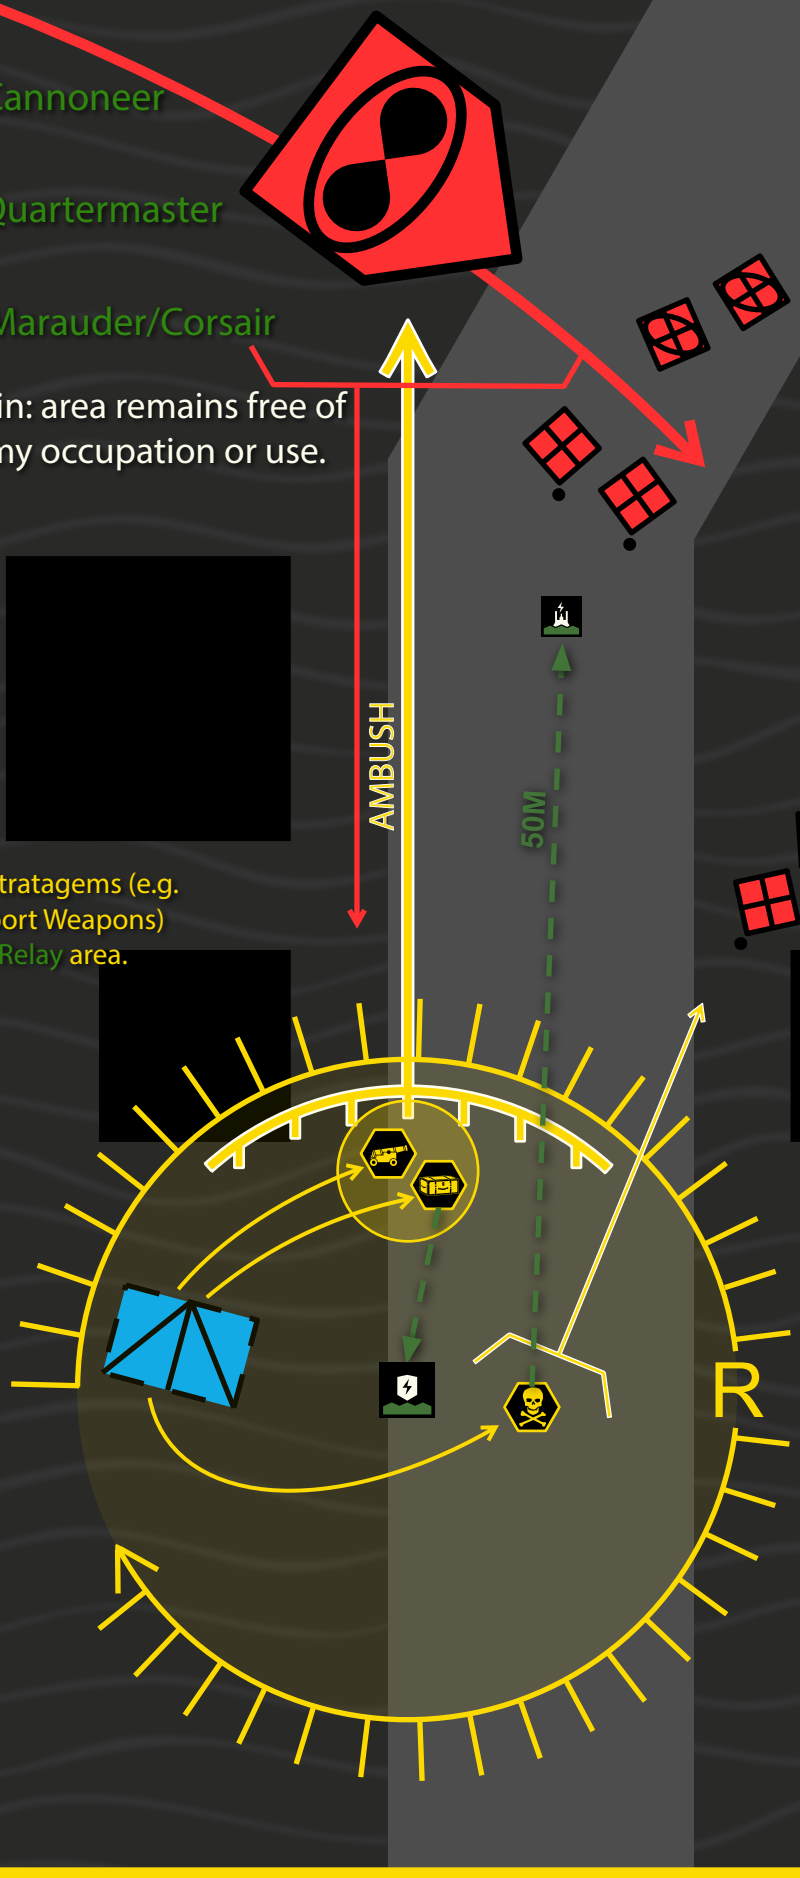

Phase 2: Attack

RR Cannoneer

SP Quartermaster

AC Marauder/Corsair

Retain: area remains free of enemy occupation or use.

RR (Cannoneer) and SP (Quartermaster) move to ambush point -- anticipating the path of the LEVI. AC (Marauder) begins RETAIN of ambush point.

A. RR finds a firing solution and deploys overlapping SHIELD GRENADES.
B. SP places RELAY to mark ambush point.
C. AC places TOWER to zone incoming patrols (check radar).

RR fires upon LEVI while SP joins RR and team reloads. Continue until LEVI is destroyed.

During ATTACK, if team reload is threatened by hostiles SP says: "BREAK" This means all squad assists in RETAIN of the RELAY area, then resume ATTACK on LEVI.

During ATTACK, if SP is resupplying and not loading RR, SP will say: "STAND BY" This means RR will keep LEVI in sight and await reload. When resuming reloading SP will say: "BACK ON YOU"

AC will prioritize watchers and notify team if reinforcements are called.
AC will call out HARVESTERS and remove their shields for RR and RR will prioritize them.

When the LEVI is destroyed RR will say: "SPLASH"
DRIVER will ping the FRV.
All squad will prepare to enter FRV.

If line of sight is lost move to a new ambush point (this can be done on foot), and restart PHASE 2: ATTACK.

When LEVI is destroyed, or ATTACK is impossible, move to PHASE 3: WITHDRAWAL

Note:

Do not throw Stratagems (e.g. Resupply, Support Weapons) into the Shield Relay area.

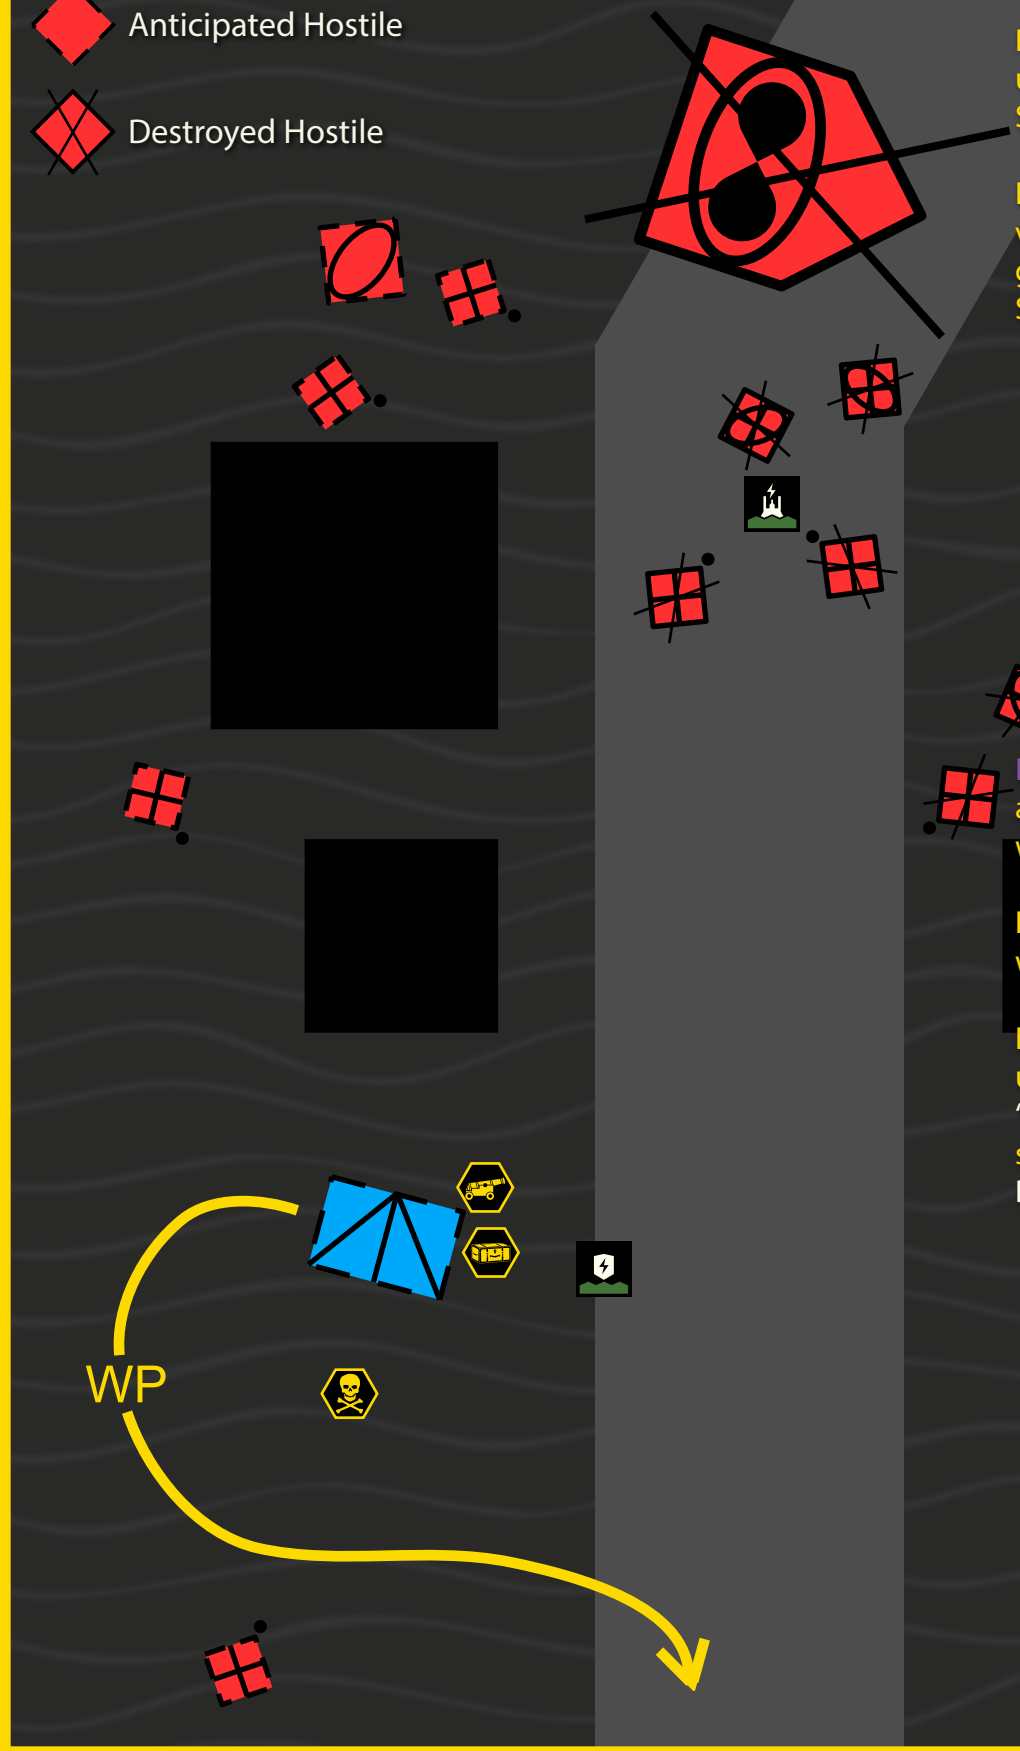

Leviathan Takedown Drill

Phase 3: Withdrawal

Harvester

Anticipated Hostile

Destroyed Hostile

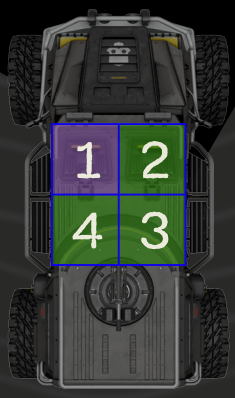

DRIVER says:
"MOUNT UP"
If you are the DRIVER or commandeering the wheel, say:
"I HAVE WHEEL" and commit to driver's seat

AC will protect the vehicle/team while team resupplies.

RR and SP perform a RESUPPLY DRILL if not under pressure.
SP fills pack from the back of the FRV

Each person will attempt to MOUNT the vehicle in the same seat each time. If you get in a different seat call out the open SEAT NUMBER (shown below).

DRIVER will withdraw under pressure (WP) and ensure that they avoid hazards during withdrawal.

If the FRV is not drivable Driver will callout who will drop a new FRV and where.

If there are supplies remaining in the undrivable FRV sqaud will call, "CANNIBALIZE", and use all remaining supplies. Driver calls a team member with Breacher or AC to scuttle the FRV.

Vechicular Drills

Laser Drill

When to use: when Orbital Laser is available, and the base not a single.
Try to conserve for later use. Be aware fleshmobs will distract the laser.

1. On approach, Driver calls out "LASER U2/(TEAM MEMBER)"
2. The team member readies the Orbital Laser and throws once in range.

Drive-by Drill

When to use: when Orbital Lasers are on cooldown, or in short supply; when the base is an open layout (warp ship doors visible from street)

SEAT 2 aka Shotgun is the designated drive-by passenger. They will be the member that eliminates warpships during drive-bys, ensure they can excute all steps effectively.
They are the only member of the squad that is cleared to lean out of the FRV AT ALL TIMES.

1. On approach, Driver calls out "DRIVE-BY DRILL"
2. Shotgun removes outpost hazards on approach (lightning spires, gazer turrets, explosive barrels)
3. Driver calls out which warpship they are targeting
4. When target warpship exterior is visible: Shotgun removes the shield with automatic fire (e.g. Stalwart, smg, assault rifle) or AC flak.
   A. The Breacher will eliminate a warpship (with or without shield) in one shot from any angle. Driver can call "BREACHER", for this.
5. When target warpship door is visible: Shotgun shoots with explosive (e.g. AC flak/APHET, crossbow, Grenade Launcher)
6. Driver moves to next warpship door sightline and repeat steps 3-5

Walk-in Drill

When to use: when a warpship is not accessible by FRV but an Orbital Laser would be overkill (a singlar warpship). When the team has an Ultimatum but not a Breacher.

The team member dismounts, ensure they are clear of the FRV fires upon the warpship using the Ultimatum, and remounts.

Rollover Drill

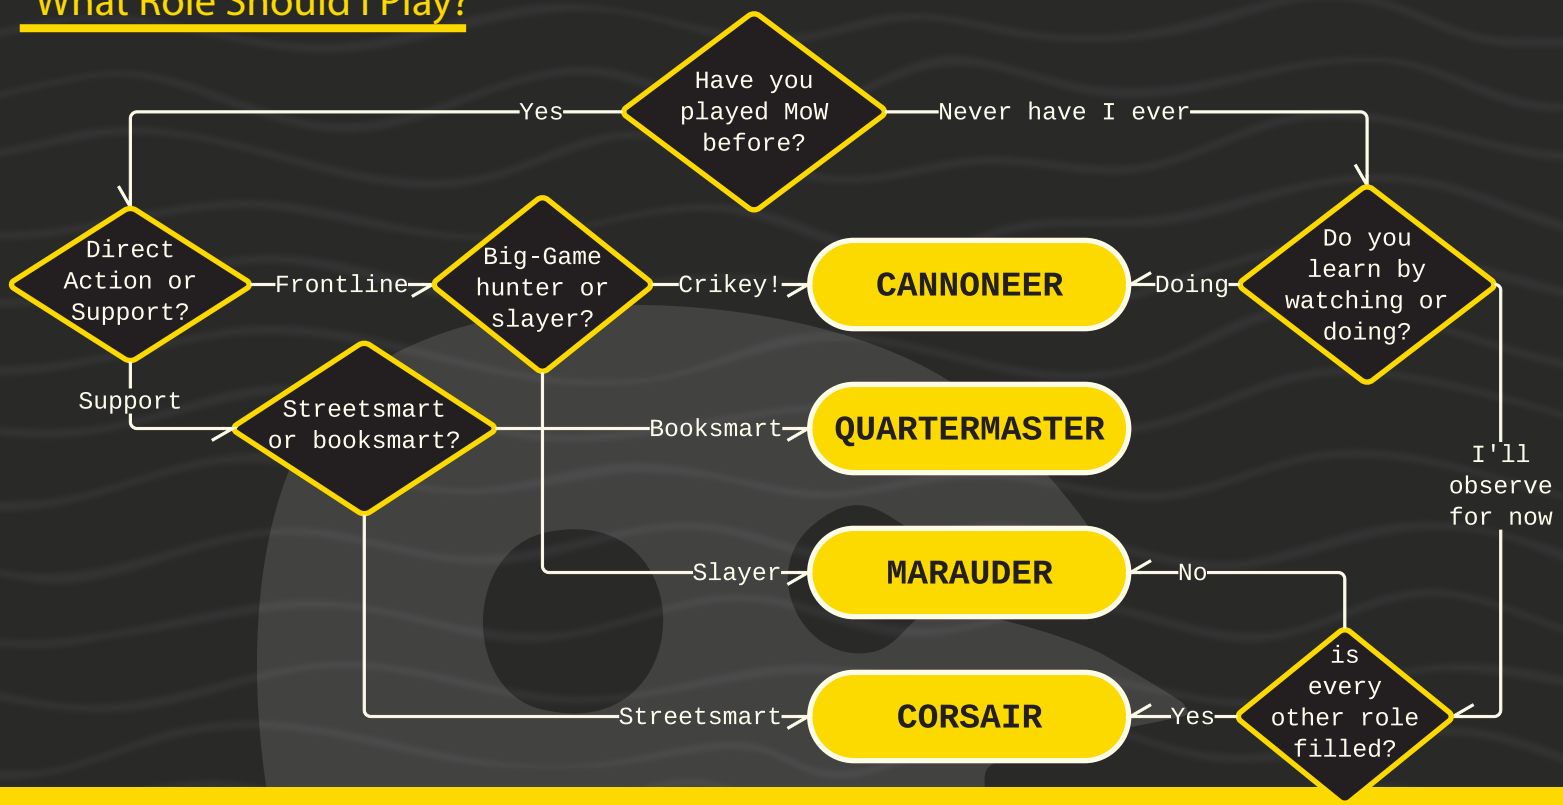

When to use: when the FRV is on its roof. This drill must be executed swiftly.
Using AC (APHET), RR (HEAT), Crossbow, Loyalist, Purifier, or Plasma Punisher.

1. The team will exit the FRV and move a to safe distance.
2. A team member then fires AC or other approved weapon at surface ~3m away from the FRV's roof.
3. The team remounts the FRV

Role Rundown

What Role Should I Play?

Driver Rank: 3

Cannoneer: Focused & Courageous
You run the RR at the center of the strategy. When in transit, keep your eyes on the skies. Your team is counting on you to plant your feet and eliminate the LEVI, especially when all hell is breaking loose.

Driver Rank: 2

Marauder: Precise & Deadly
You run the AC as the primary security for the Whaling Team. Protect the team and your FRV. Communicate when your position is being overwhelmed. Deny Illuminate drops with extreme prejudice.

Driver Rank: 4
Nav Preferred

Quartermaster: Organized & Experienced
You run the SP and manage the supply of the RR. Stick to your Cannoneer like glue. Precise control of your resupply vs. reloading will maximize your supply efficiency. You will ensure that your team selects good AMBUSH locations by keeping an eye on the radar.

Driver Rank: 1

Corsair: Observant & Adaptive
You learn the strategy and observe any shortcomings of your team. Once you know where the team is weakest, your job is to shore up that need. This role is best for those learning the strategy or for those who would like to experiment within it. Continuing the evolution of Meals on Wheels.

Driver, Navigator, & Shotgun

Driver: Anyone can drive in the Meals on Wheels strategy, and Driver can even change during the mission. Some roles, however, serve better as Driver (best is Rank 1).
Driver is in charge of who and when a new FRV is dropped.

Navigator: A good Navigator is essential to assist your Driver keeping their eyes on the road and your Cannoneer watching for Leviathans. If you are the Navigator, you will be directing the squad from objective to objective and identifying the course of action.

Shotgun: See Drills - Drive-by Drill (prev page) Quartermaster is Shotgun unless some else calls it.

Driver's Guide

General

- You are in charge of who and when a new FRV is dropped, make sure to give a location to drop it.
- The handbrake can be used to turn the FRV quickly.
- It is more important to be in control of the FRV than it is to be fast.
- Flipping over or ejecting teammates slows you way down.
- Try to keep the map visible to be able to orient yourself.
- DO NOT try to be your own Navigator.
- Drive is the main gear you use as it allows you to reach greater speeds
- 1st and 2nd gear should not be ignored. The limited speed can be beneficial, especially on difficult terrain.
- Make sure the team knows to avoid reloading the turret of the FRV

Parking

- Whenever parking the car make it clear you are stopping by saying, "DISMOUNT".
- Avoid Parking near barrels or in open areas, alleys often work well
- If the FRV is damaged or overrun after parking, it is better to find a safe place and drop a new one
- When engaging, predict the Leviathan's path and deploy the team in a location that allows time to setup.
- Once the relay is deployed park inside of it.

Outpost

- Decide between using a Drive-By-Drill or an Orbital Laser to eliminate an outpost. Weigh the following criteria: How much pressure is the squad under? How accessible are the doors to the warpships? How many warpships are present?
- If Orbital Laser is used direct a specific team member to throw theirs

Hazards

Keep these in mind when driving the FRV

Illuminate barriers
Can contain Hidden barrels that can be driven through w/o blowing barrels, but Illuminate can hit a barrel causing it to explode

Destroyed Cars
Solid but driving over them will cause them to explode

Illuminate batteries
These will explode during collisions, killing passengers

Illuminate Beacon
Can be driven through at moderate speeds, but are solid at low speeds

Sand bags
Solid no matter the speed

Harvester
Beam can melt the FRV

Fleshmob
Attacks Flip FRV
Acts as a solid barrier

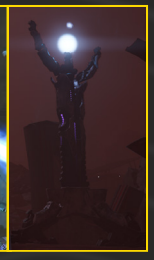

Stingray
Heavily damages the FRV in a single strafe

Leviathan
Melts the FRV quickly

Illuminate Obstacles
Lighting Spire can wipe the team while, the Gazer can heavily damage the FRV. Barrels do heavy damage and set Helldivers alight.

Navigator's Guide

Navigator acts as the teams director, controlling and comunicating where the team is going. Communicate your plan with the team.

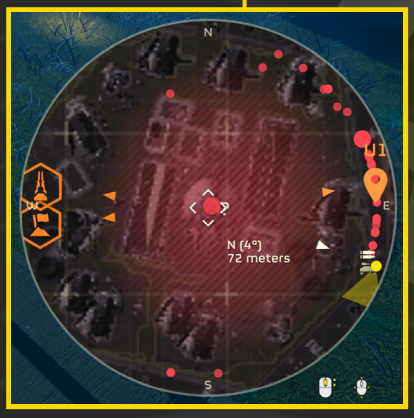

Drop

- As Navigator, it is your job to determine where the squad will drop. This will give you a better idea of the map layout and squad orientation.
- Dropping at extract is often best. If dropping here, call a Super Destroyer Resupply.
- The speed of the FRV allows dropping further from objectives.

Mission

- Determine the heading of the squad and direct them from objective to objective.
- Pin the map to direct Driver.
- Tell the squad to pin upcoming objectives to improve flow. Especially useful on planets with Ion Storms, so that they appear on your compass while the map is jammed.
- Tell Driver good entry points for Objectives. Ask what info Driver needs from you.
- The Cognitive Disruptor greatly inhibits the deployment speed of Shield Generator Relay, make it a priority target, eliminate it as soon as reasonable.
- Help Driver decide between using a Drive-By-Drill or an Orbital Laser to eliminate an outpost. Check your map to determine the number of warpships present in the outpost (see examples below). Inform Driver of the following criteria: How much pressure is the squad under? How accessible are the doors to the warpships? How many warpships are present?

1 Ship

2 Ships

3 Ships

Cognitive Disruptor

Note: This icon will appear to mark the Cognitive Disruptor after Lidar has been completed or a helldiver discovers the objective.

Low	Guarded	Elevated	High	Severe

LEVIATHAN THREAT LEVEL

Cannoneer

- Cannoneer is equipped to eliminate the heaviest hostiles—Leviathans and Harvesters; keep your team safe by removing the largest threats. See 'Takedown Drill' and 'Your Target' for info on killing Leviathans. For Harvesters, aim for center mass and avoid hitting their horns.
- Be aware that buildings often have larger hitboxes than what is visible.
- Make sure the RR is always on HEAT
- Your positioning and attitude are very important during a takedown. Keep these in mind:
  1. find a flat area
  2. keep your right side free of obstruction
  3. ensure there is space for Quartermaster to your right side in the bubble
  4. plant your feet
  5. don't crouch or go prone and stay ADS
- Always maximize Shield Grenade overlap, stand still and throw them in quick succession.
- Say, "SELFING", when you load the RR yourself, is useful when the team is under pressure.
- Deploy point defense on drops or when holding objectives.
- Cannoneer is in charge of any terminals or other objective actions.

Quartermaster

- Quartermaster acts as Cannoneer's primary loader.
- The highest priority targets are Watchers and hostiles threatening the Whaling Team.
- When team reloading Cannoneer, it helps to face the same direction as Cannoneer when initiating the team reload; to resupply them, aim at their backpack.
- Maintain awareness of your surroundings when team reloading. Be ready to say, "BREAK", if under threat.
- During a Leviathan Takedown Drill Quartermaster may direct Marauder/Corsair to focus on certain areas/targets as necessary. You may refer to them as "SECURITY".
- If Cannoneer needs to use a Super Destroyer Resupply tell them, "USE TEAM SUPPLY", and tag it.
- Try to keep a Supply Pack in reserve for emergencies, prioritize refilling your pack from the FRV. Avoid using the Super Destroyer Resupply to refill the Supply Pack; it is inefficient.
- If your Shield Generator Relay is on cooldown during a takedown say, "YOUR RELAY", and Marauder will drop theirs.

Resupply Drill

When to use: when the RR and pack are fully emptied

Cannoneer stands still with RR equipped

Quartermaster/FRV resupplies Cannoneer

Quartermaster team reloads Cannoneer

Quartermaster/FRV resupplies Cannoneer again

Quartermaster refills from the FRV (until Supply Pack is full)

Cannoneer Doctrine

Your Role's Pillars

Recoilless Rifle
Never leave port without your HARPOON GUN. MoW uses the RR delivering massive damage to Leviathans to BRING THEM DOWN.

Shield Grenade
Instant uptime and great protection from Leviathans. Drop 1-2 when engaging and get the RR up.

Supply FRV
The wheels with meals; the FRV is the core of MoW. Resupply from the FRV when your pack has 2 rounds or less.

Point Defense
Tesla Tower or Flame Sentry. Helps to zone during a takedown. Just don't place it too close. MINIMUM 50m (safe distance)

Loadout checklist

Your RR is for Leviathans and Harvesters, so the rest of your loadout must be tuned to make space for a clean takedown.

Ol' Reliable

Due to your support weapon being reserved for the heaviest targets, you must have a reliable weapon for all other targets. It should be effective both in CQB and against watchers. A mix of RoF and precision is required, options with an underbarrel weapon attachement can also pack a punch.

Something Extra

Your other weapon should give you something extra to make up for your lack of teeth. Explosives can be helpful to make clearing areas easier.

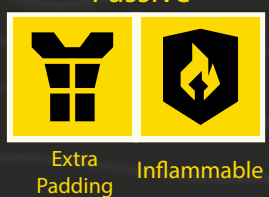

Utility

Orbital Laser is best, if the team already has 2 lasers you can sub it out for additonal point defense.

Armor and Booster

The Shield Grenade is your main defense from Leviathans' lasers.
The B-01 tactical armor is the best combination of speed and protection.
Inflammable augments your defense against Leviathan lasers.

Sample Loadout

Quartermaster Doctrine

Your Role's Pillars

Supply Pack
The Supply Pack allows takedowns to run more smoothly and for longer. Keep it full by resupplying from the FRV.

Shield Generator Relay
The relay keeps the team and FRV safe; get it down quickly when engaging.

Orbital Laser
Not all encampments can be quickly or effectively taken out by drive-bys. The laser solves this, best used on heavy encampments or when under pressure.

Loadout checklist

You are the 2nd member of the squad. Your combat role requires you to support and augment the Marauder's protection. You will need a weapon for each niche.

CQB

During a takedown, a weapon for close quarters is required for quickly clearing voteless or an overseer. Also used to clear shields.
SMGs or ARs are very effective.

Demolition

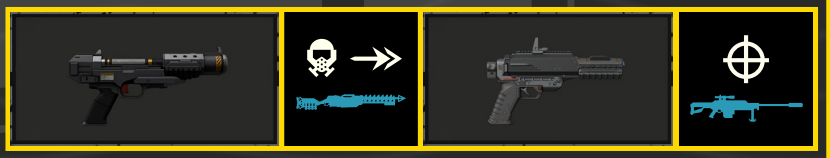

During drive-bys these options are for firing into ships after the shield is down. Use explosive weapons.

Grenades

Area denial is used for reducing pressure on the team, use fire or gas. Anti Tank Seeker or Giga grenades can quickly clear an area but must be used with caution and additional grenade armor for best effectiveness.

Technical

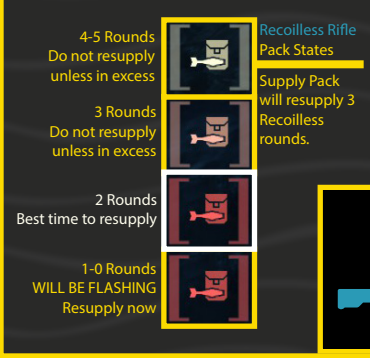

A slot used for additional support of the team. If facing Appropriators, the AMR is most effective. AMR and Pissle are effective against Stingrays. If all areas are covered, default to Breacher for tricky drive-by angles. The Speargun can act as Demolition and stun Fleshmobs well.

Armor and Booster

Blunt-Force Mitigation is best due to the mix of armor and safety from the backblast of Cannoneer. Extra Padding is simple and reliable, allowing greater overall survivability. True Grit is best when support weapon uptime is vital. Many other choices can work.
Light and Medium armor are best, allowing greater mobility for engaging.

Sample Loadout

Sailing Team Protocols

READ YOUR PARTNERS PROTOCOLS

Marauder

- Marauder is the team's PRIMARY SECURITY.
- Watchers are the most important targets and must be eliminated.
- Marauder is the member best equipped for clearing chaff and Fleshmobs; keep the team safe by eliminating them.
- Deploy point defense during Leviathan Takedown Drills or when holding objectives.
- When a Harvester is spotted, call it out to the Whaling Team (direction, distance, description) and use the AC flak to strip the shields, your whaling team will make it a priority.
- Eliminate Stingrays quickly with AC flak.
- The AC on APHET can be used against Harvesters in emergencies.
- If Quartermaster says, "YOUR RELAY", drop your Shield Generator Relay to cover the team.
- Listen to Quartermaster's directions during the Leviathan Takedown Drill.
- Have 'Quick Weapon Wheel Left' bound so that you can switch AC fire modes in the FRV (under change keybinds: combat). You should be on flak a majority of the time.
- Reload the AC as soon as possible, when the mag contains 5-1 rounds, to reduce time to reload.
- The Super Destroyer Resupply belongs to Sailing Team. Use it often and at your discretion.

Corsair

- Corsair is the 4th member and is the team's SECONDARY SECURITY.
- Listen to Quartermaster's directions during the Leviathan Takedown Drill.
- Your primary directive is to augment security, but some Stratagems are not compatble with this.
  - Non barrage orbitals suffer from repositioning
  - Eagles are inconsistent, but can be used with caution.
  - Expendables hinder speed when dismounting and mounting up.
  - Fire/gas/arc/laser guard dogs will tag teammates too often.
  - Gatling/MG/Rocket/AC/Explosive Mortar sentries will teamkill often and destroy shield relays.
  - Mines are a danger to the FRV and Whaling team whose attention is often directed upwards.
- This role is ideal for onboarding new players
  - It is the role that still allows a player to observe the team, while reducing pressure to perform.
- In experienced teams Corsair is designed for research and development, continuing the evolution of Meals on Wheels.
- The Super Destroyer Resupply belongs to Sailing Team. Use it often and at your discretion.

Marauder Doctrine

Your Role's Pillars

Autocannon
The perfect weapon for eliminating anything threatening the team. Keep it on Flak to delete all but the heaviest of the Illuminate.

Supply FRV
The wheels with meals; the FRV is the core of MoW. Avoid using the supplies from the FRV; you make the call for destroyer resupply when you are low.

Shield Generator Relay
The relay keeps the team and FRV safe; get it down quickly when Quartermaster's is not available.

Point Defense
Tesla Tower or Flame Sentry.
Helps to zone during a takedown.
Just don't place it too close.
MINIMUM 50m (safe distance)

Loadout checklist

You are the 3rd member of the squad. Your role requires you have maximum lethality with precision.
You will need a weapon for every situation.

Watchers

Watchers are the source of reinforcements, so keeping them down keeps the team safe. Precision is a requirement.

CQB

When things get ugly having a weapon for close quarters is required for quickly clearing voteless or an overseer. SMGs or ARs are very effective.

Area Denial

Area denial is used for reducing pressure on the team, use fire or gas.

Armor and Booster

Uptime on the Autocannon is a priority; True Grit maximizes maneuverability and uptime, making it best for Marauder. Extra Padding can be good for general survivability.
Heavier armor allows you to shrug off more hits before going down, making it a necessity.

Sample Loadout

Corsair ~~Doctrine~~

Idea Board
Loadout Ideas

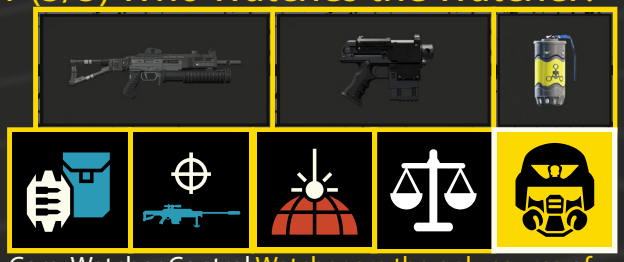

You are the 4th member of the squad. Your role requires you augment the whole team. Here are some examples with their rating (e.g. #2), difficulty(e.g. 3/5), and core principle
Try one of these before making your own.

Your Role's Pillars

Supply FRV
The wheels with meals; the FRV is the core of MoW. Avoid using the supplies from the FRV; you make the call for destroyer resupply when you are low.

Flexibility
You have the most choice in your loadout. Your role is to find weak points in the team and shore them up. Pick options to help complete the team.

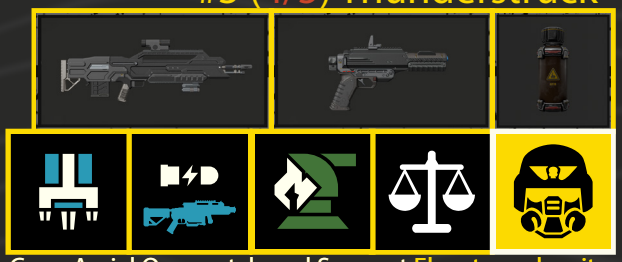

Booster Options

#1 (3/5) Who Watches the Watcher?

Core: Watcher Control Watcher are the only source of Illuminate reinforcements. The Guard Dog and AMR ensure they stay down.

#2 (1/5) Same Same, but Different

Core: Fleshmob & Chaff Clear If you really like Marauder just copy their homework and make it look a little different.

#3 (4/5) Thunderstruck

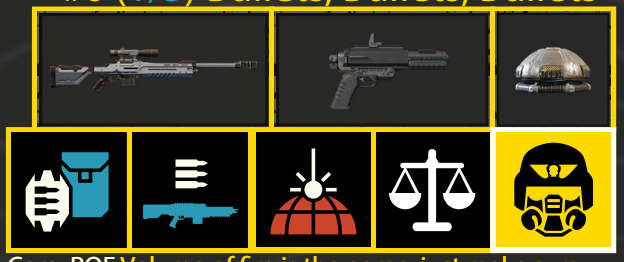

Core: Aerial Overwatch and Support Elevate and smite hostiles, just dont fry teammates.

#4 (3/5) Rapid Demolition

Core: Offensive Defense Hold the trigger and Thunk, Thunk, Thunk till they are all dead.
Call resupplies often.

#5 (5/5) The Golden Gun

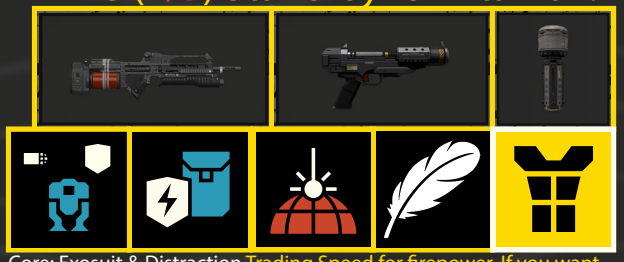

Core: Perfection & Precision The Nova puts down Stingrays and Watchers in one shot and can damage Leviathans, but is VERY puninishing if you miss.

#6 (1/5) Bullets, Bullets, Bullets

Core: ROF Volume of fire is the game, just make sure you don't mow down your teammates. Sightliner is for long range.

#7 (2/5) The Witch Doctor

Core: Support Medic divers here is your loadout!

#8 (4/5) Stand by for Titanfall!

Core: Exosuit & Distraction Trading Speed for firepower. If you want to be the wall your team stands behind this is it, just make sure you don't fall behind. Exosuit and backpack are flexible. Hellbomb Backpack is good for monolith. The Patriot also works.

Condensed Strat

Meals on Wheels: Team Reloaded is designed with reduced team size in mind.

The minimum size that MoW can operate at is 2, consisting of Cannoneer and Quartermaster.
Cannoneer will be Driver.
As a smaller team you must engage quickly and be ready to move if things go south.
While you may only have 2 team members, random teammates can be useful as distractions.
Without security, Cannoneer must ensure the area is safe before initiating PHASE 2: ATTACK.

Loadouts must be modified to accommodate the smaller team size as follows:

Cannoneer

No changes

Quartermaster

bring Supply FRV not Orbital Laser
bring Guard Dog not Supply Pack
bring Missile Pistol for Stringrays

When a third player joins during a mission, they deploy as...

Reinforcement Marauder

bring a Supply Pack not FRV

With a team size of 3, consisting of Cannoneer, Quartermaster, and Marauder.
No changes are needed to loadouts; the team just needs to be on their game.
Keeping Watchers from calling is essential to running smoothly.
